halo

BRAND BOOK · VERSION 1.0 · 2026

AI that feels like second nature.

CONTENTS · BRAND BOOK V2.1

halo

Light, not machinery.

How halo looks, sounds, moves and speaks, so every touchpoint feels like the same calm, capable companion.

Implementing?
Build screens from chapters 09–10 with Developer Kit v1.2. Chapters 01–08 are the foundations they rest on. Chapter 11 is the Round 1 history; its visuals are replaced, each page says by which.

01 · MISSION

Make technology feel like a natural extension of what you can do.

Halo is an open-source, privacy-first personal cognitive assistant. It connects voice, vision, memory, everyday tasks, phone controls and wearables into one experience. It runs on your device first and reaches for the cloud only when you choose.

On-device first | Open source | Your data stays yours

Everyone. Starting with the curious.

Now

Early adopters

Alpha testers, open-source contributors, makers and tinkerers who want to shape a genuinely useful assistant.

Next

Everyday people

Students, families and privacy-conscious users who want AI that actually helps with daily life.

Always

The not-so-techy

Children, older adults and anyone who finds tech intimidating. If they feel at home, everyone does.

Design test: could a 9-year-old and a 79-year-old both understand this at a glance? If not, simplify.

01 · BRAND PRINCIPLES

Three words. Every decision.

Futuristic

Technology from tomorrow, shown with restraint. Light, glow and space instead of circuits and chrome.

Human

Warm, honest and a little playful. Halo shows its results and its failures. It talks like a friend, never a machine.

Effortless

Nothing to operate, nothing to decode. Fewer words, bigger type, one clear action at a time.

We are **not**: robotic · mystical · corporate · hype-driven · intimidating

Our primary logo.

PRIMARY LOCKUP — MINT GRADIENT RING + NIGHT INK WORDMARK ON CREAM

An open circle.

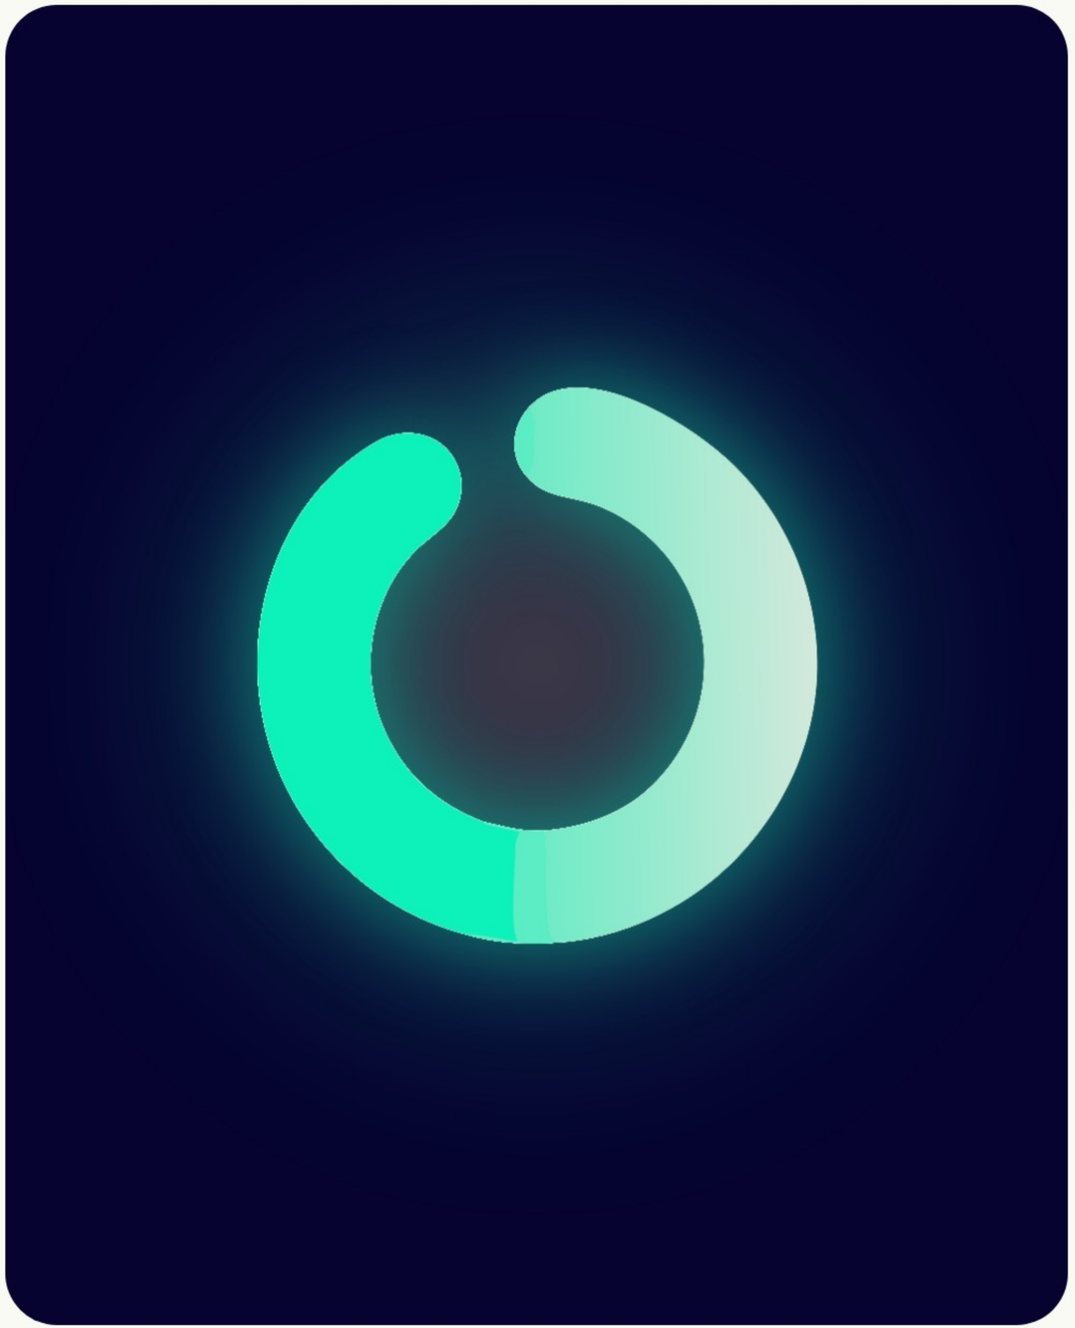

A closed ring is a boundary. Ours is open on purpose.

The gap = open source. Halo is built in the open, with room for anyone to contribute.

The ring = a halo of light. Help that surrounds you quietly, instead of a screen you stare at.

The gradient = on-device to cloud. Bright and close at the core, softer as it reaches outward.

Rounded ends = human. No sharp edges, nothing robotic.

Give it room to glow.

Keep clear space on all sides equal to the ring's stroke height × 2 — marked **x**. Nothing enters this zone: no text, edges or other logos.

FULL LOCKUP

halo

120 px digital
30 mm print

RING ALONE

24 px digital
8 mm print

One mark, four ways.

Primary
Default for light surfaces.

Reversed
Night Ink and dark photography.

Mono
One-color print, engraving, stamps.

App icon
Launcher, favicon, avatars, glasses HUD.

Please don't.

✕ Stretch or squash it

✕ Rotate it, or move the gap

✕ Recolor it outside the palette

✕ Place it on purple-blue "AI" gradients

✕ Add sparkles, stars or effects

✕ Retype the wordmark

The lowercase wordmark

“halo” in Sora, with the Open Ring as its “o”. One idea for the logo, the app icon and the header.

halo

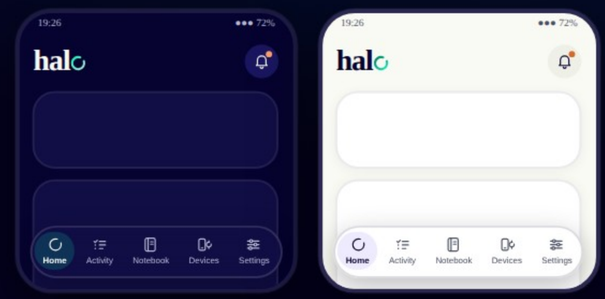

PRIMARY · ON NIGHT INK

halo

ON CREAM · RING STAYS MINT

halo

ON MINT · ONE COLOUR

- The “o” is the Open Ring: same 45° gap, upper right. Never a plain letter o.
- Ring is always halo Mint (deeper Mint on light). It does not follow the accent colour.
- In the app header the ring may show three states only: ready, needs you, offline.
- Min size 16dp tall. Clear space = the ring's width on every side.
- Sora 600, tracking −3%. Never capitalised, never stretched, never outlined.

Minimum body size: 16 px on screen, 10 pt in print. Sentence case everywhere. Never all-caps for more than three words.

A thoughtful friend who knows a lot.

Warm

We sound glad to help. Never cold, never transactional.

Clear

Short sentences, plain words. If a child can't follow it, rewrite it.

Honest

We say what Halo can and can't do yet. Failures are shown, not hidden.

Lightly playful

A smile, not a joke. Delight in the details, never at the user's expense.

Tone shifts with the moment: **celebratory** for wins, **calm and precise** for errors and privacy, **inviting** for contributors.

05 · SAY IT LIKE HALO

Do / Don't.

DO

"Done — your alarm is set for 7:00. Sleep well."

DON'T

"Task executed successfully. Alarm parameter configured."

DO

"I couldn't open that app. Want me to try another way?"

DON'T

"Error 403: Action not permitted."

DO

"This stays on your phone. Nothing is sent anywhere."

DON'T

"Revolutionary AGI-powered magic that changes everything!"

Avoid: "magic", "revolutionary", "AGI", "unleash", "seamless", jargon, fear-based privacy messaging.

The Halo voice.

A custom-designed brand voice: warm, calm and unhurried, with a soft smile in it. Neutral international English, crisp articulation that children, older adults and non-native listeners can follow easily.

Pace: unhurried, natural pauses

Pitch: gentle mid-range, gender-neutral leaning

Feel: reassuring, lightly playful, never robotic

Use for: onboarding, product videos, tutorials, voice replies

VOICE SAMPLE AVAILABLE IN THE HALO BRAND KIT

How halo talks: confident, welcoming, transparent

Every string from your screenshots, rewritten. Full list in the strings file: English first, ready for Latvian and Russian.

Confident
Say what halo will do, in the first person, then do it.

“I’ll set a 10-minute timer.”

Welcoming
Plain, warm words. Talk with people, never at them.

“Ready when you are.”

Transparent
Say where it happens, what it touches, and why.

“I answered on this phone. Nothing left it.”

TODAY IN THE APP	HALO SAYS
~~Configured · not checked~~	Saved. Not tested yet.
~~Configuration is saved. Check the connection before relying on it.~~	One quick test and you’re ready.
~~Mode: Automatic~~	I’ll pick Ask or Act, and check with you before I touch your phone.
~~Task paused~~	“Open Chrome” is paused at step 2. Pick up where I left off?
~~No pending actions right now.~~	All clear. Nothing needs you.
~~Reflection · No durable learning needed~~	(hidden) · or “Nothing new to remember.”
~~Provider turn started (provider.litert.local)~~	Thinking on this phone
~~Cancelled · Interaction interrupted~~	Stopped when you interrupted. Nothing was changed.
~~Enter a learning goal or choose material to begin.~~	What would you like to learn? I’ll take it from there.
~~hf-8b7104a44b99c29c22bfb6b5~~	On-device model · 2.1 GB (full ID under Details)
~~Unknown glasses · 31:E3:A5:BA:A6:16~~	Glasses ·A6:16 · very close
~~Searching does not connect it.~~	Searching won’t connect anything until you choose.

Say
I · you · on this phone · paused · didn’t work · needs your OK · ready

Avoid
error · failed · invalid · provider turn · configured · durable · execute

Numbers
“Step 2 of 3”, “about 5 seconds”, “1 update” — exact and singular when it’s one

Kids
Short sentences. One idea. “Ask a grown-up if you’re not sure.”

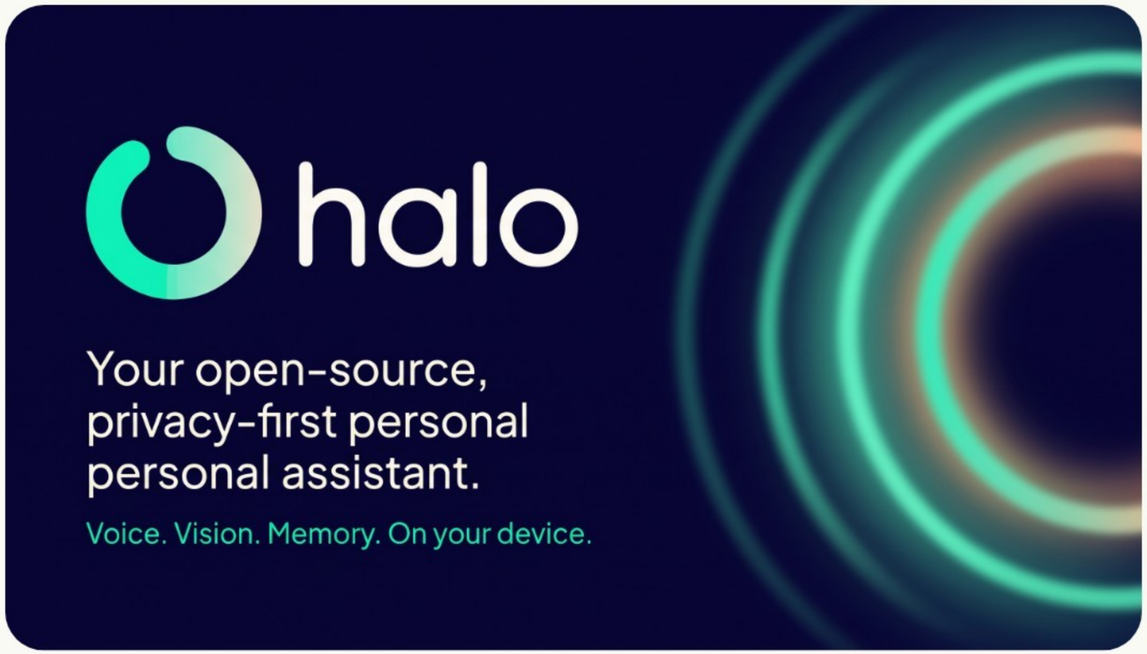

Show the light, not the machine.

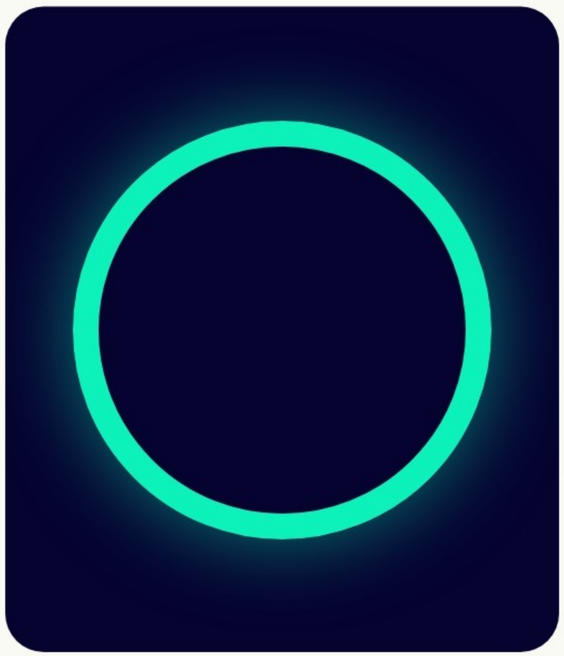

Motif: soft mint rings and glows that radiate, ripple or frame. Always calm, never busy.

Photography: real people in everyday moments — kitchens, buses, classrooms, workbenches. Natural window light, warm tones, Halo present but in the background.

Surfaces: Cream paper and stone in daylight; Night Ink for evening and focus.

Never: robots, glowing brains, circuit boards, sparkles, holograms, purple-blue neural gradients.

07 · APPLICATIONS

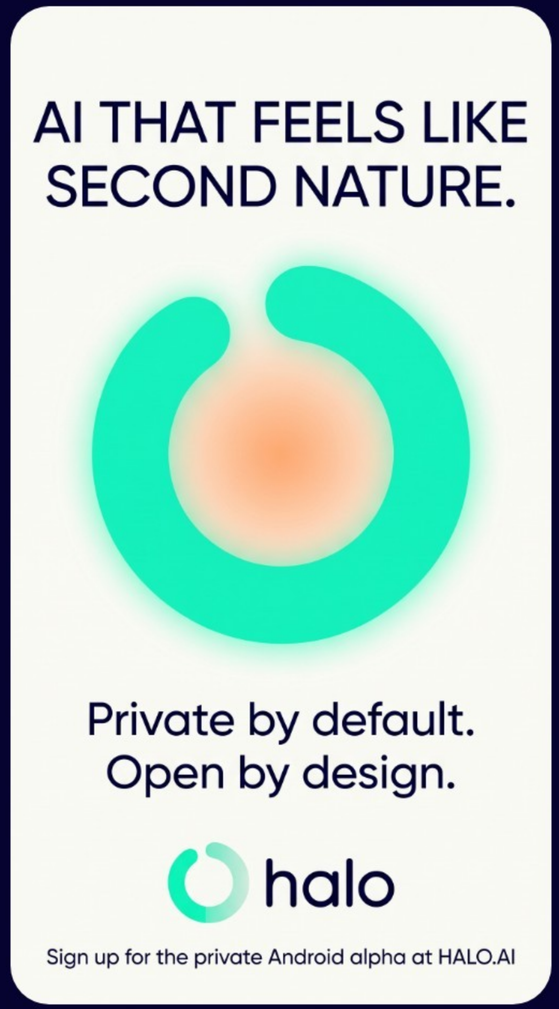

In the hand.

On every screen.

08 · IN-APP SYSTEM

The ring comes alive.

Inside the app, the Open Ring becomes Halo's body language. Its gap rests, travels, closes and calls for you. Icons share the same hand, and every surface, from the 16dp notification to the full-screen orb, speaks one visual language.

85 icons · 24dp · 1.75 stroke

21 presence states · 15 animated

3 layers · 4 sizes · Mini Halo, Floating Halo, widgets, launcher

HALO IN-APP SYSTEM · 01

Icon system

24dp grid · 1.75 stroke · round caps & joins · 2–4.5 radius corners. Every circle carries the Open Ring gap at upper right. Active = Mint dot in the corner, never color alone.

KIDS MODE · 01

Same Halo, a warmer hello.

Kids mode keeps every state and every honesty rule, then warms the ring with Apricot, thickens it by 25%, gives idle a smile, and speaks in short, kind sentences. Anything that acts on the phone asks a grown-up.

Hi! I'm here when you need me.

IDLE

I'm listening!

LISTENING

Hmm, let me think...

THINKING

On it!

ACTING

Here's what I found!

SPEAKING

I'm waiting for you.

WAITING

Can I do this? Ask a grown-up if you're not sure.

APPROVAL_REQUIRED

All done!

SUCCESS

Oops, something got in the way. Let's try again.

WARNING

That didn't work. It's okay, we can try again.

ERROR

I need a grown-up to say yes first.

PERMISSION_MISSING

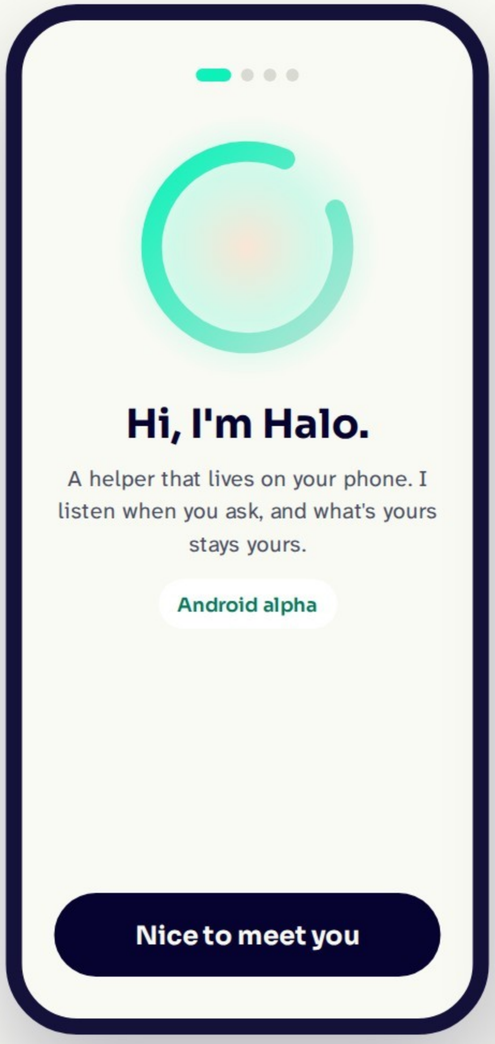

Okay, I stopped.

STOPPED

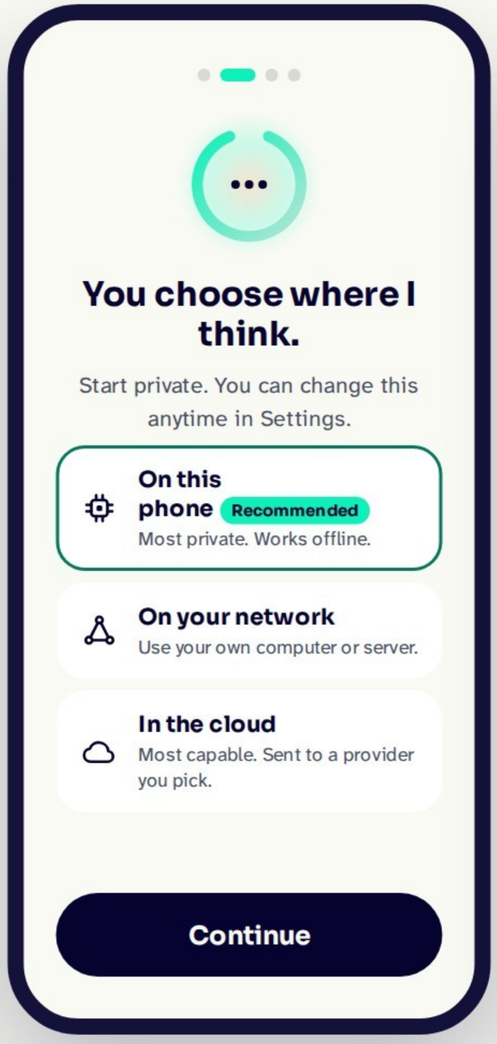

ALPHA ONBOARDING

Four screens to trust.

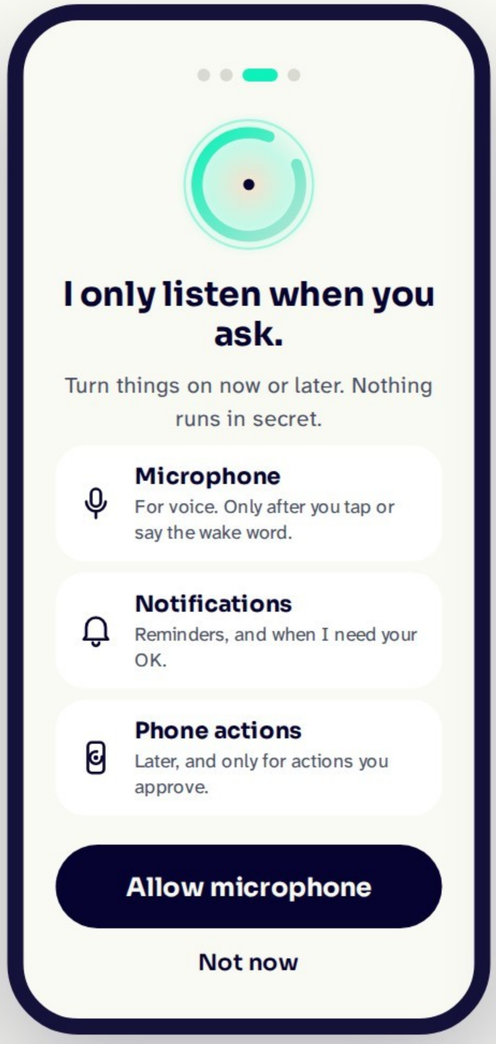

Hello, then choose where Halo thinks, then honest permissions, then the alpha invitation. Every screen shows the orb in the state it describes, and nothing is switched on without a tap.

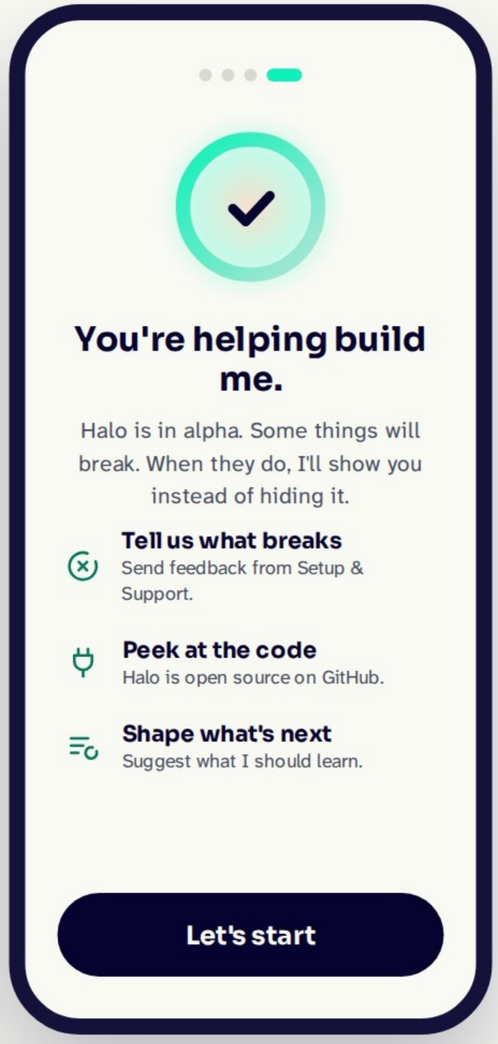

1 · Welcome

2 · Where

3 · Listen

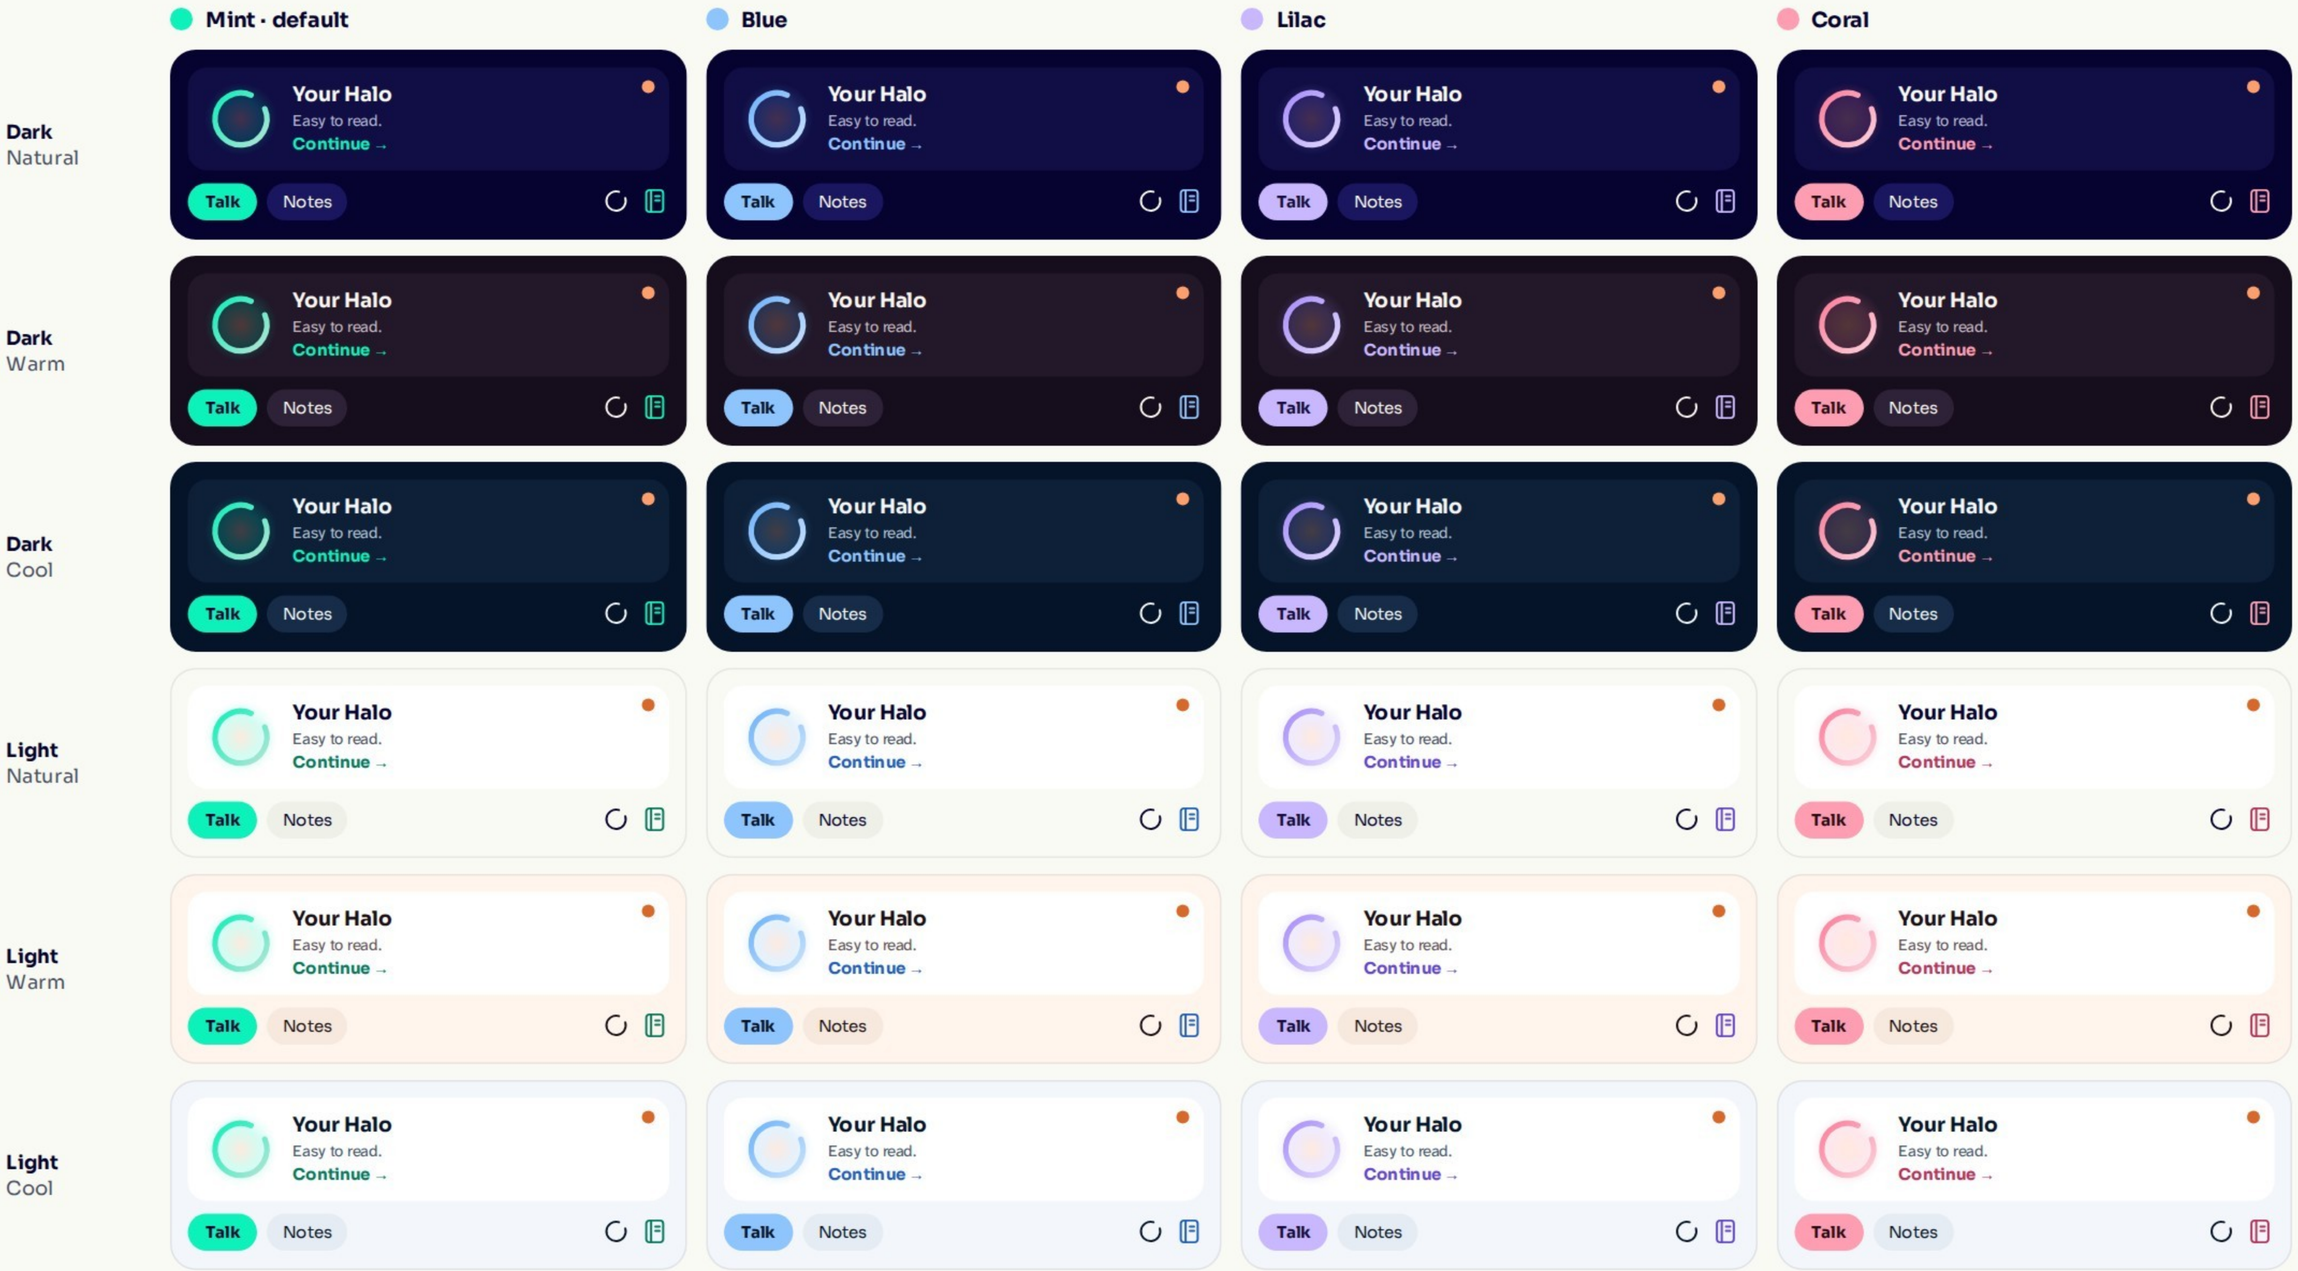

4 · Alpha

APPEARANCE · 01

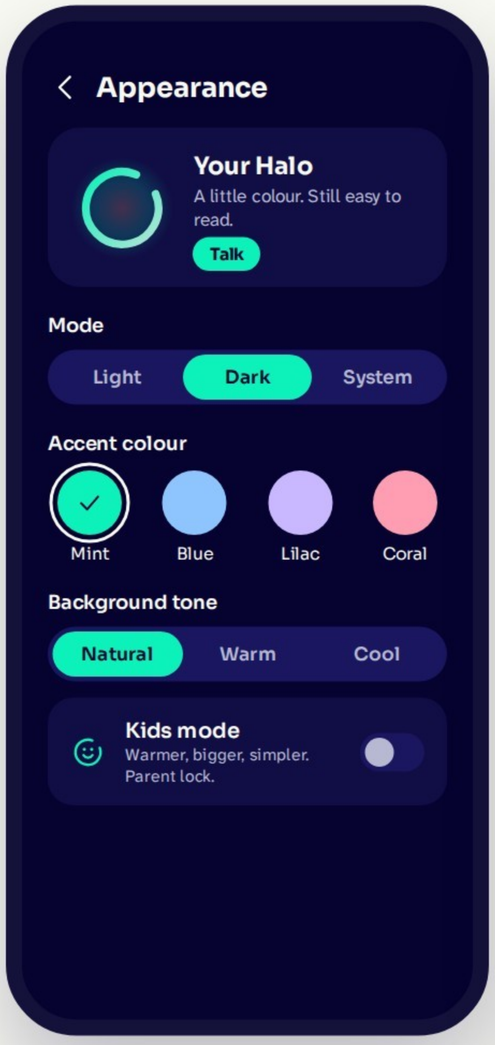

24 themes, one Halo

Your Appearance settings (Light/Dark × 4 accents × 3 background tones) mapped to brand-safe colors. Every combination passes WCAG AA for text and controls.

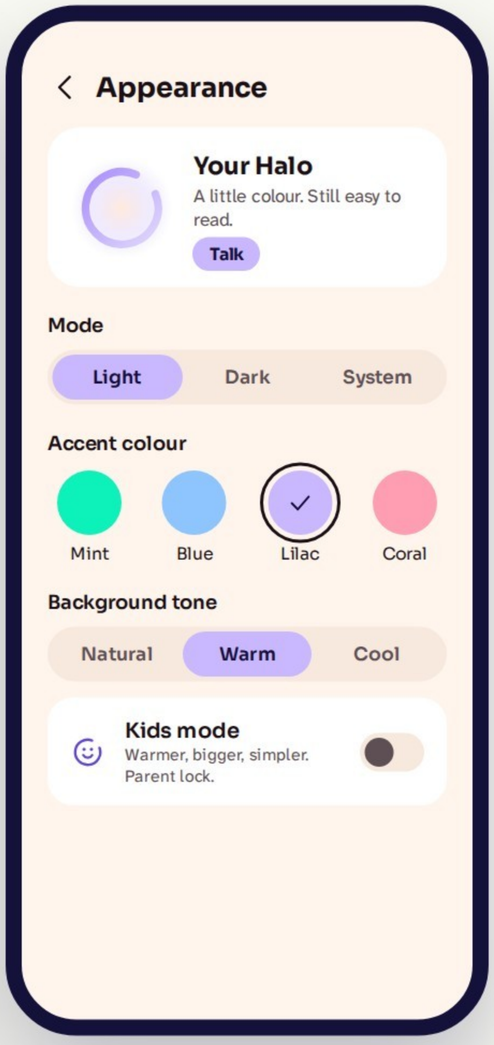

APPEARANCE · 02

Personal, still on-brand

Dark · Natural · Mint (default)

Light · Warm · Lilac

Accent changes

Buttons, selected chips, links, progress, the active-tab dot, and the in-app orb ring.

Accent never changes

The logo, launcher icon and marketing (always Halo Mint), plus the meaning colours: Apricot = Halo needs you, red = error.

Coral, retuned

Your current Coral (#F5BEA9) sits right next to Apricot, so "accent" and "needs you" would look the same. Coral moves to rose #FF9EB3, clearly apart.

Light mode text

Accents are pastel fills with dark text on top. As text or icons on light backgrounds, each accent has an ink shade: Mint #047A5E, Blue #1F5FBF, Lilac #6446D6, Coral #B8325A.

Background tones

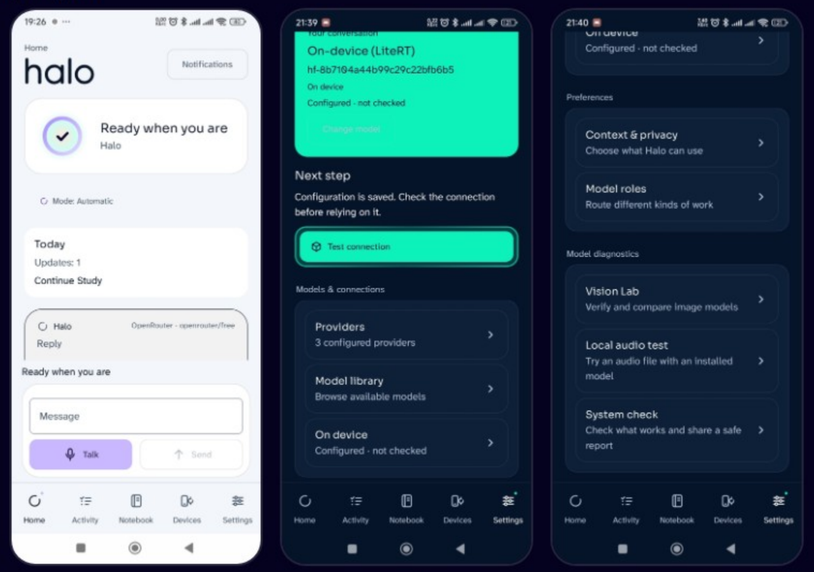

Natural = brand Night Ink / Cream. Warm and Cool shift the background and surfaces only; text keeps AA.

Kids mode

Defaults to the Warm tone and keeps the Mint→Apricot kids ring regardless of accent. Parents can still change the tone.

What round 1 missed

Round 1 fixed order, wording and icons. Round 2 adds what was missing, gives halo a signature light, and makes it guide people.

New this round: Light Home and the real Intelligence screen. I also went back through all 34 screenshots from Notebook, Tools, Appearance, Devices and Settings.

ROUND 2 SETS OUT TO ADD

- **halo FX** A signature light language: aura, trace, edge glow, shimmer, bloom, ripple.
- **halo Guide** halo's light points to the one best next step, on every screen.
- **Kids 2.0** A real place for children, with a parent space.
- **2027 polish** Floating nav, bigger type, softer depth, light + dark.
- **Language** Confident, welcoming, transparent. Every string rewritten.

STILL MISSING FROM THE DESIGN

1. **Light theme**
   The app ships Light (your Home screenshot, Lilac). Round 1 only showed Dark.
2. **Notifications centre**
   Home has a Notifications button, but there was no design for what it opens.
3. **Reply actions**
   Copy, Save to Notebook and Copy reply exist on every answer. Add Listen.
4. **The real Intelligence screen**
   "Your conversation" model card, Next step, Providers, Model library, On device, Model roles, Context & privacy, Vision Lab, Local audio test, System check.
5. **Notebook editing parts**
   Find & replace bar, Paragraph blocks (move, add, delete), Add block, Insert object.
6. **Canvas "More" and Card actions**
   Organize board, Ask halo to organize, Find, Rename, Fit all, Reset view, Export to note, Study this canvas.
7. **Study material + options**
   Read text from a photo, Saved material, Add a file, and "Age, language & learning options".
8. **System pieces**
   Toasts, confirm dialogs, loading, text-field errors, empty states and the language picker.
9. **One wordmark**
   Decided: lowercase "halo", with the Open Ring as its "o". See the wordmark page.

KEEP AND BUILD ON

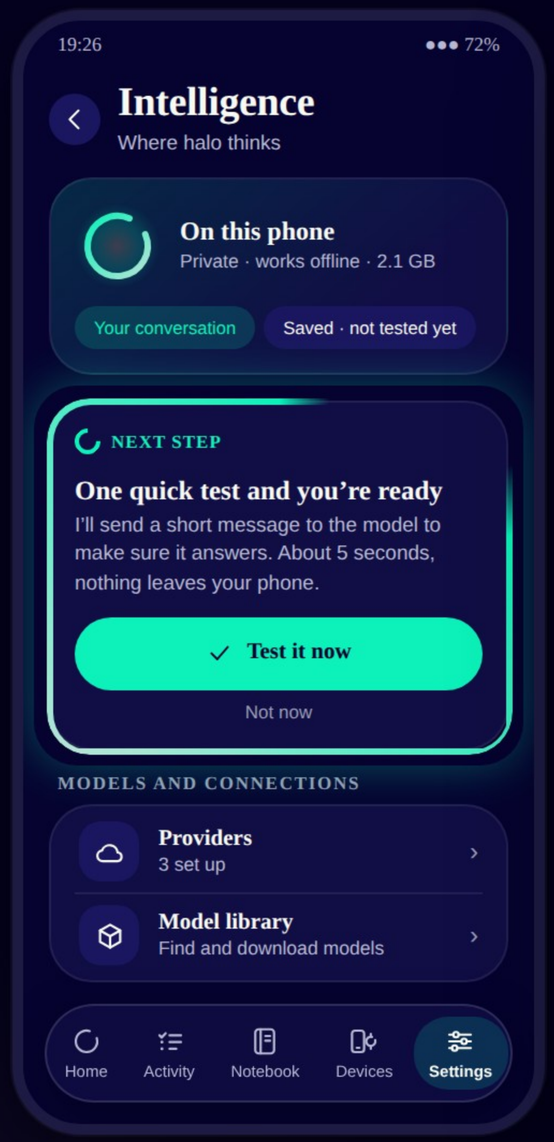

The "Next step" card
Your Intelligence screen already tells people what to do next. That idea becomes the halo Guide everywhere.

Plain section names
"Context & privacy", "Choose what halo can use" — close to right already.

Honest status
"Configured · not checked" is truthful. It just needs warmer, clearer words.

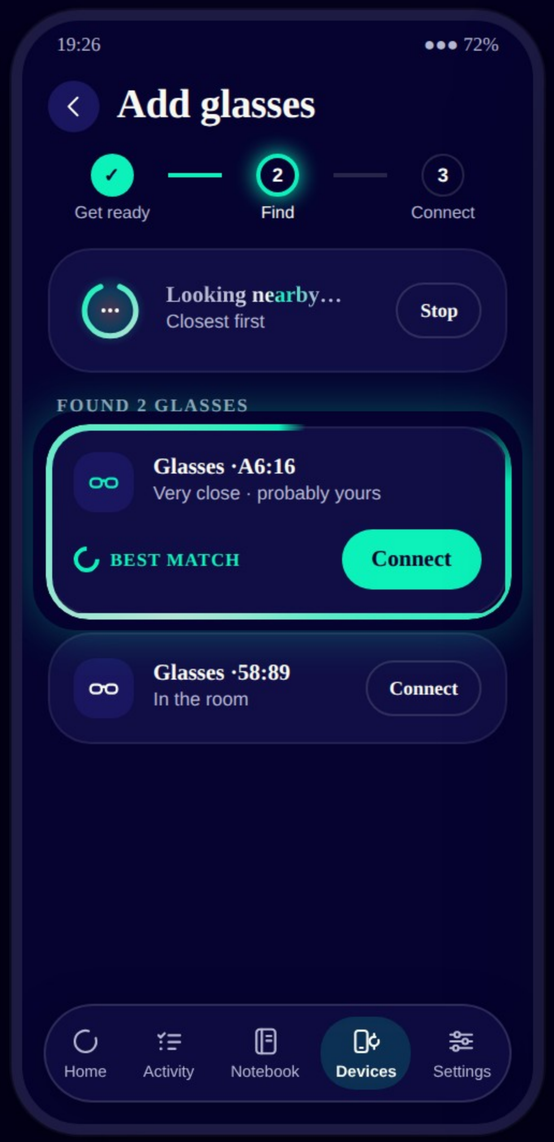

halo Guide: the light shows the way

On every screen, halo’s light rests on the single best next step. People always know what to do, and why.

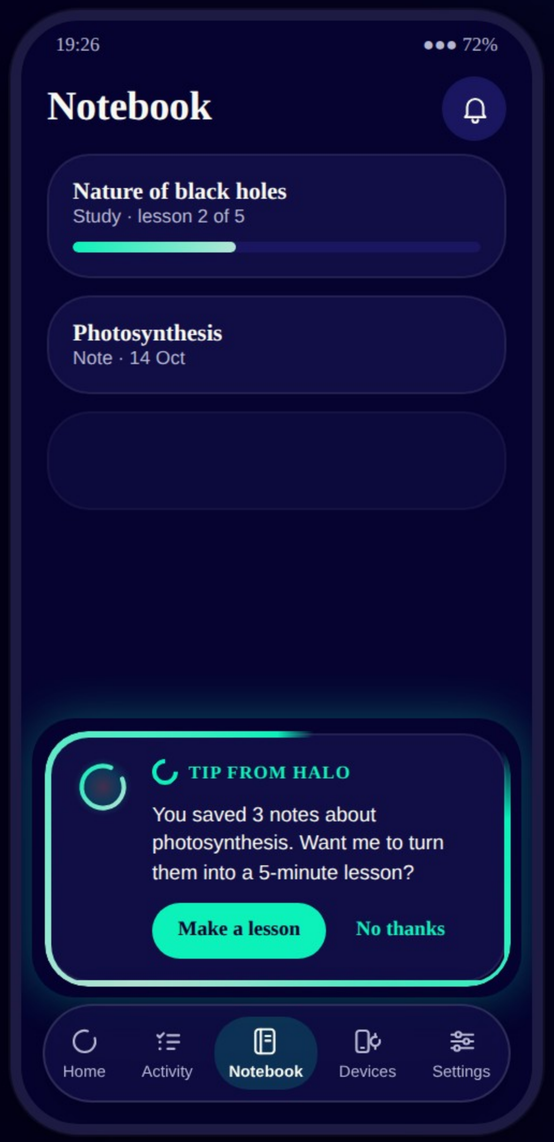

Intelligence · next step

Your real “Next step” card, warmer: it says what the test does, how long it takes, and that nothing leaves the phone.

Pairing · best match

The step path shows where you are. The likeliest pair gets the light, so the choice is obvious.

halo tip

halo spots something useful and offers it once, with a clear yes and no.

GUIDE PARTS

Next step card
The one thing to do next, why, and how long it takes. Always with “Not now”.

Traced action
The button inside gets Trace. Only one per screen.

Step path
Multi-step flows. Done = filled, current = glowing ring, next = outline.

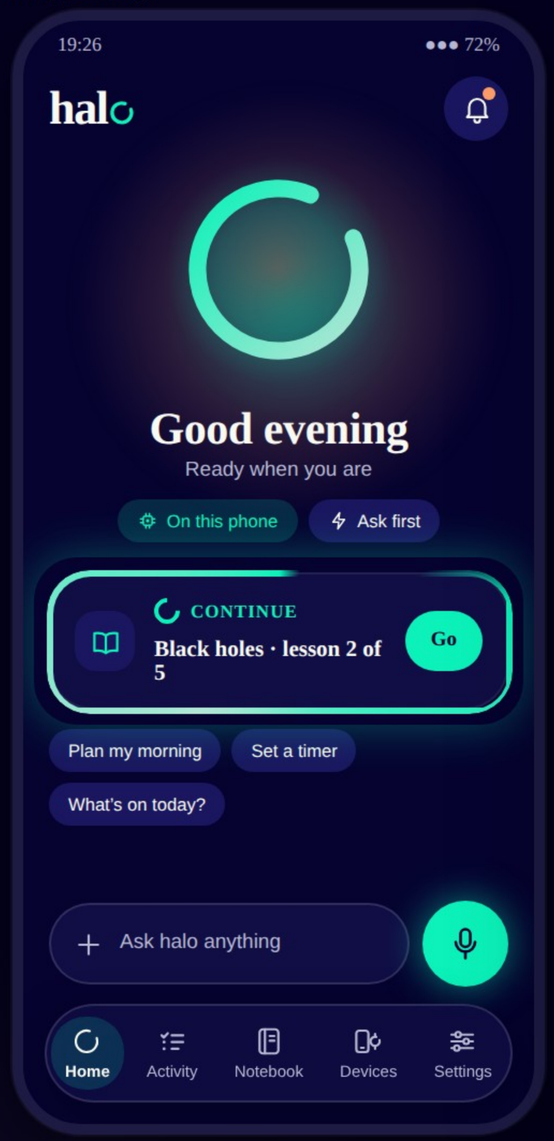

halo tip
A suggestion halo noticed. Dismiss once and that tip type goes quiet for a week.

RULES

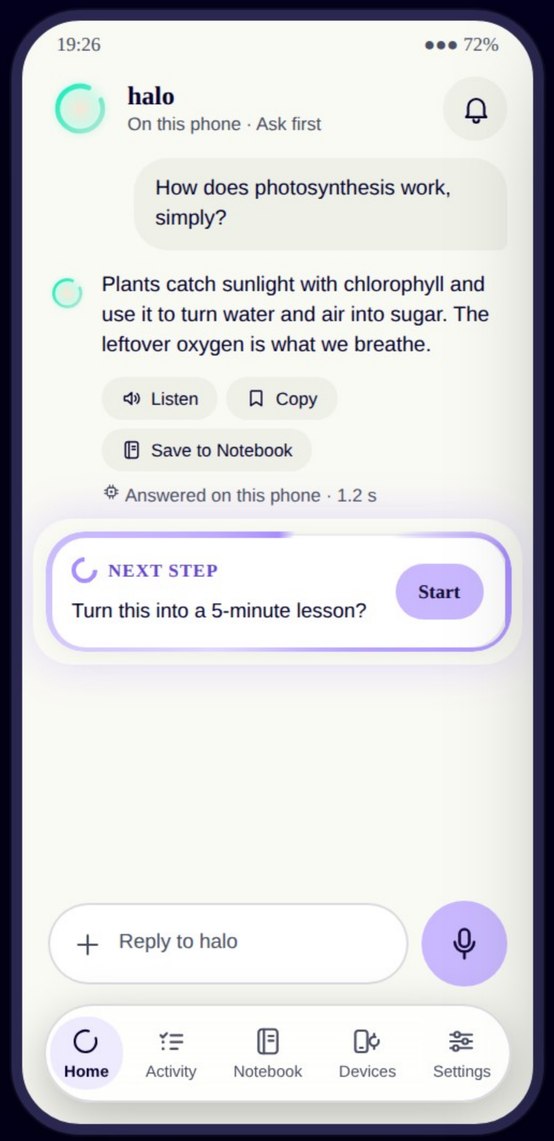

- Guide = your next step (accent light). Apricot = halo needs you. Red = something broke.
- Never guide toward the cloud, a purchase, a new permission or anything destructive.
- Always say why, and offer a way out.

Home, refined for 2027

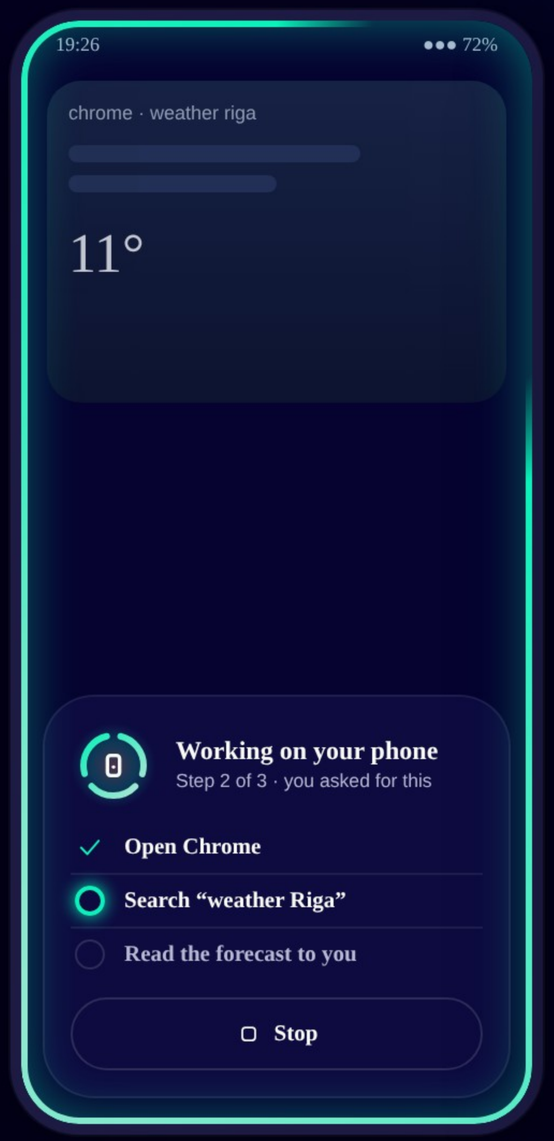

Floating navigation, bigger type, softer depth. Light and Dark from the same parts. halo’s light only moves when something is happening.

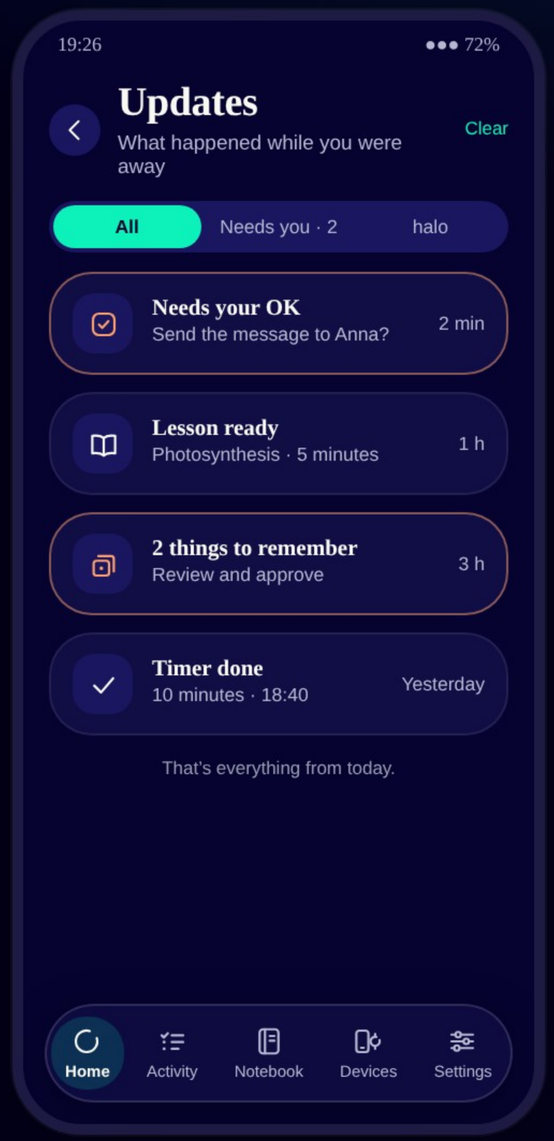

Home · dark
A calm hero with Aura, where halo thinks, and how it acts. The Guide offers the one thing to continue. The mic is the hero action.

Home · light (Lilac)
The conversation with real reply actions: Listen, Copy, Save to Notebook. Every answer says where it was made.

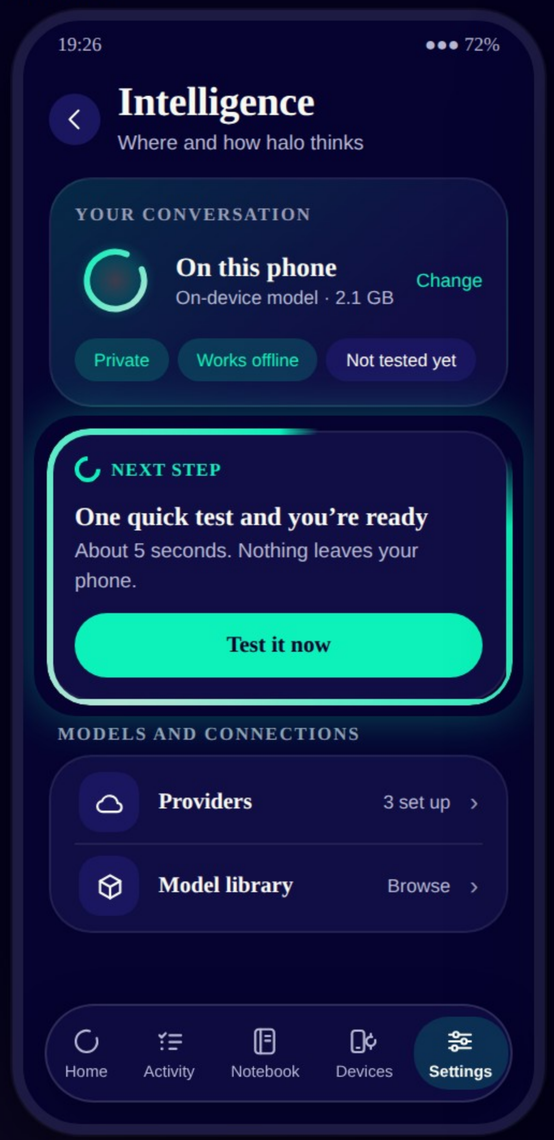

halo is acting
Edge glow around the whole screen while halo works on your phone. The steps card floats, and Stop is always there.

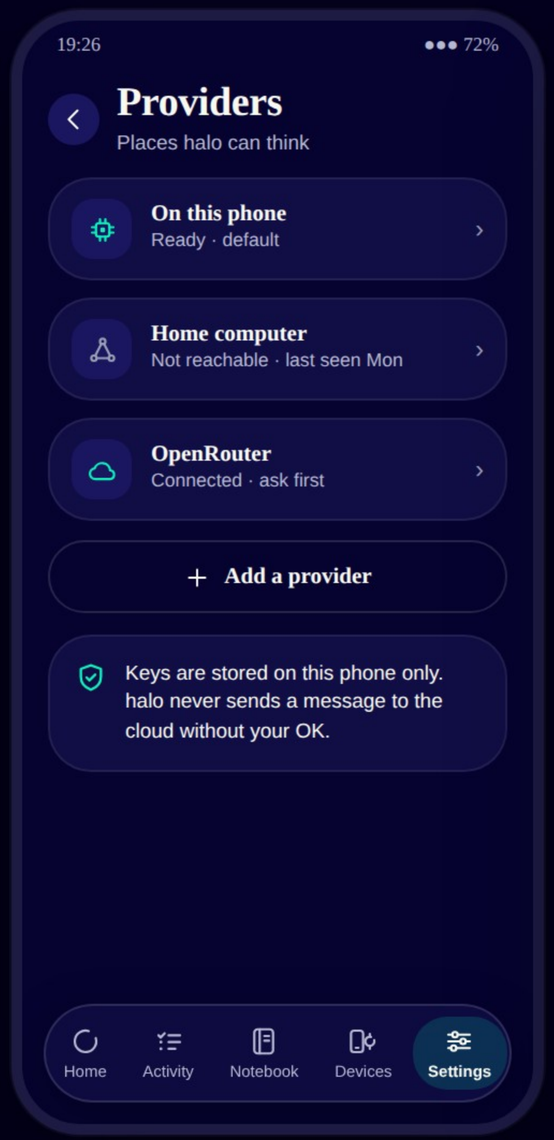

Updates (Notifications)
The missing Notifications screen. “Needs you” items carry Apricot. A clear end line, so nothing feels endless.

Intelligence, from the real screen

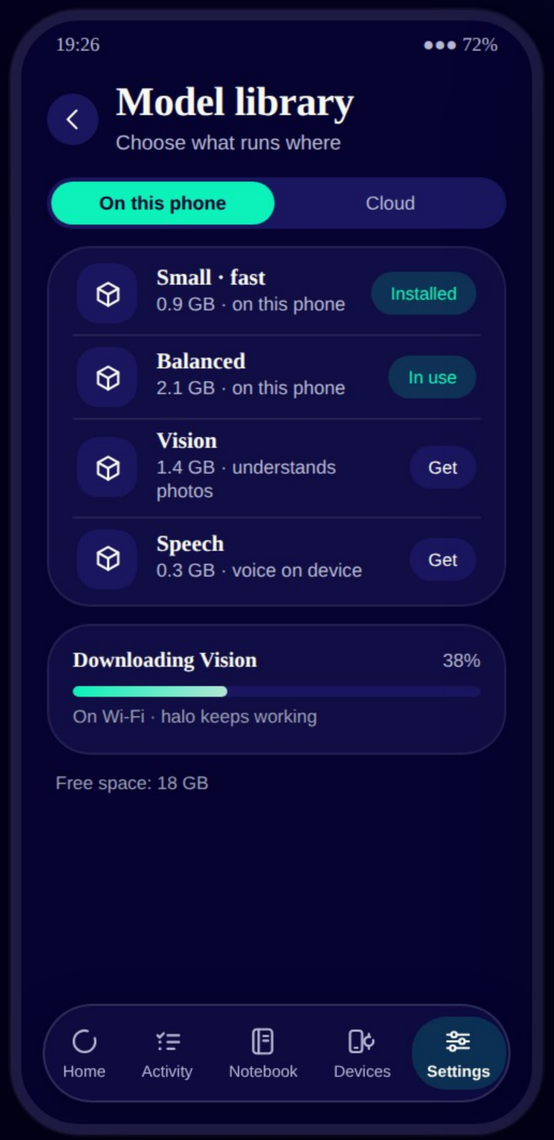

Every part of today’s Intelligence screen, rewritten in plain words: where halo thinks, which model does which job, and how to check it.

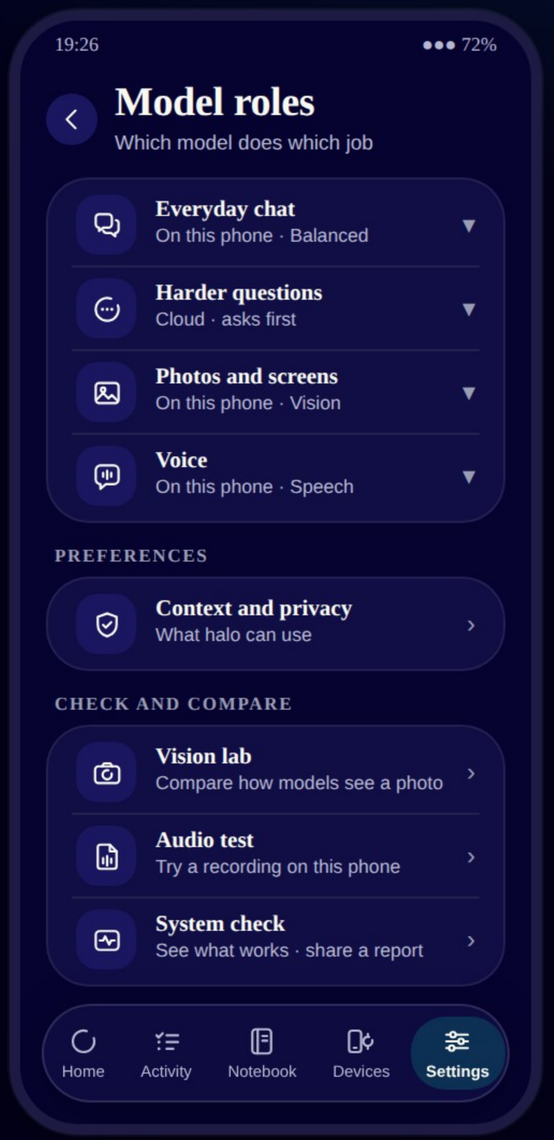

Intelligence
Built from your real screen. The model ID becomes plain words, “Configured · not checked” becomes “Not tested yet”, and the test gets the Guide.

Providers
Each place to think, with an honest status. The home computer that can’t be reached is grey, not red.

Model library
On this phone / Cloud. Sizes in GB, what each model is for, and downloads that never block halo.

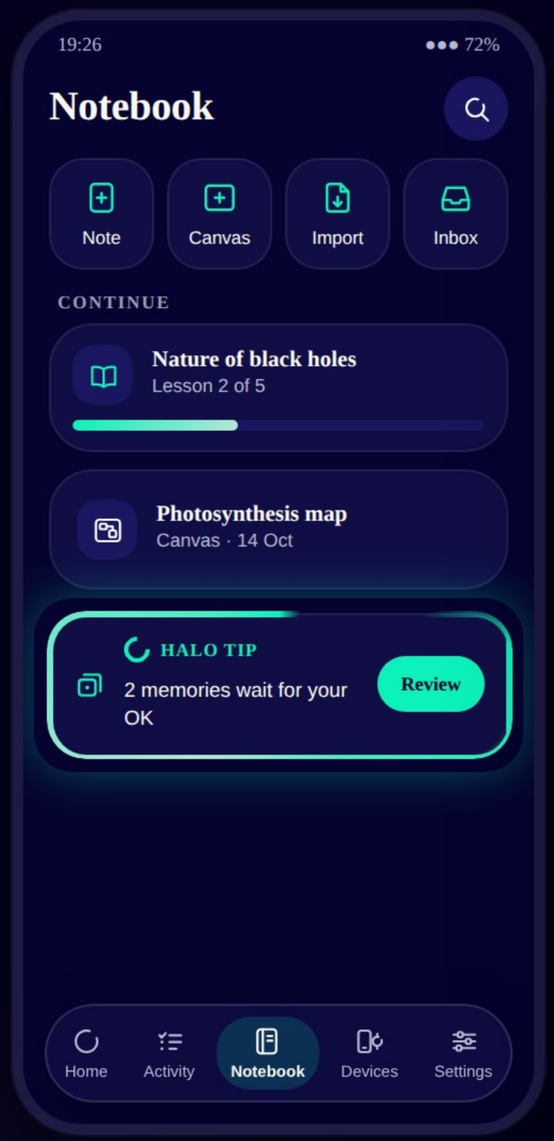

Model roles + diagnostics
“Route different kinds of work” becomes a list of jobs. Vision Lab, audio test and System check sit under “Check and compare”.

HALO · ROUND 2

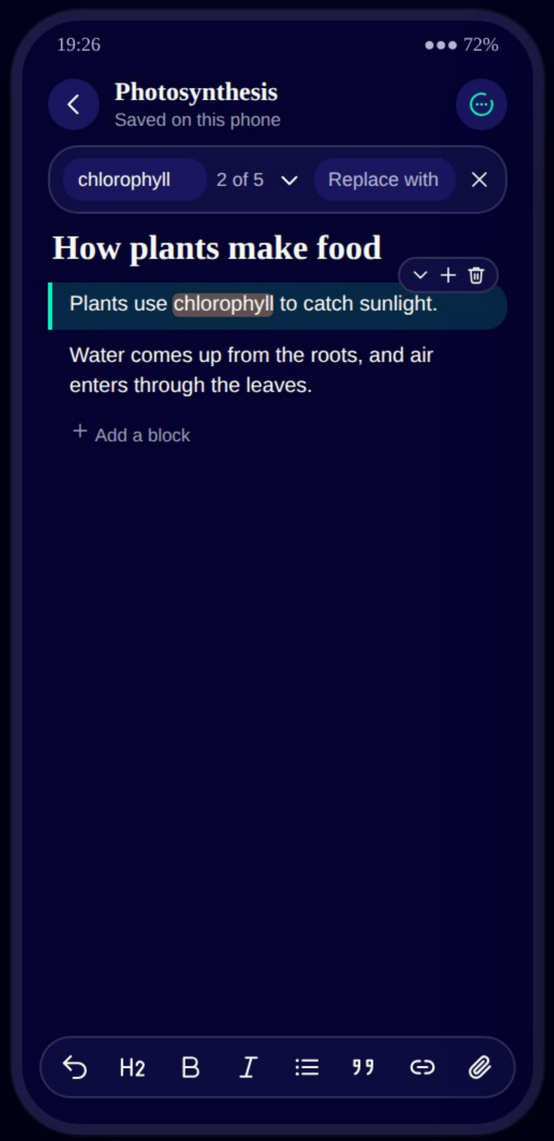

Notebook, Canvas and Study

The editing pieces that were missing, now designed: find & replace, blocks, the Canvas menu and Study's material step.

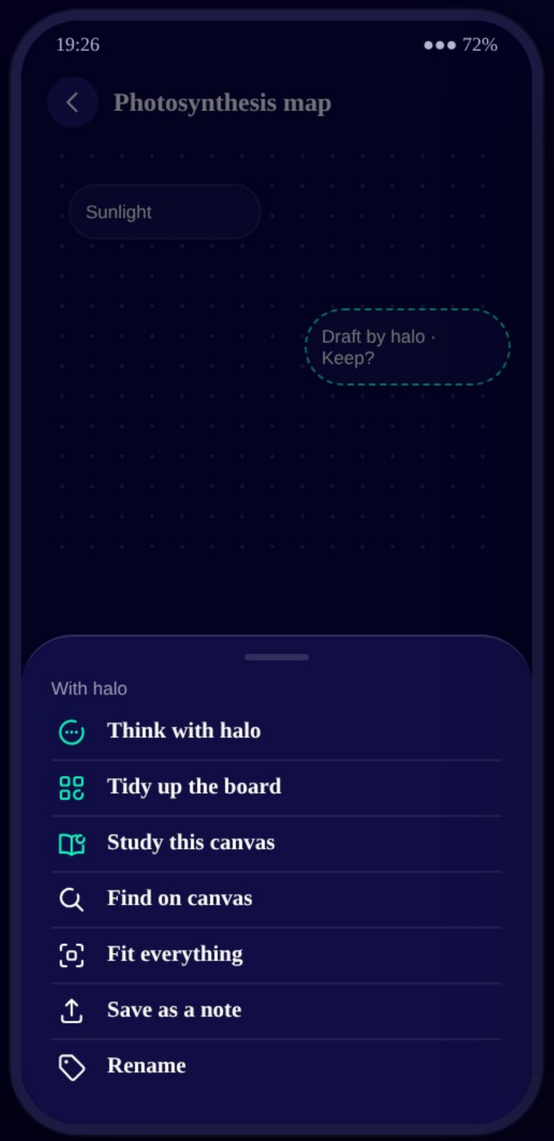

Notebook home

One-tap create, Continue with progress, and a halo tip for memories waiting.

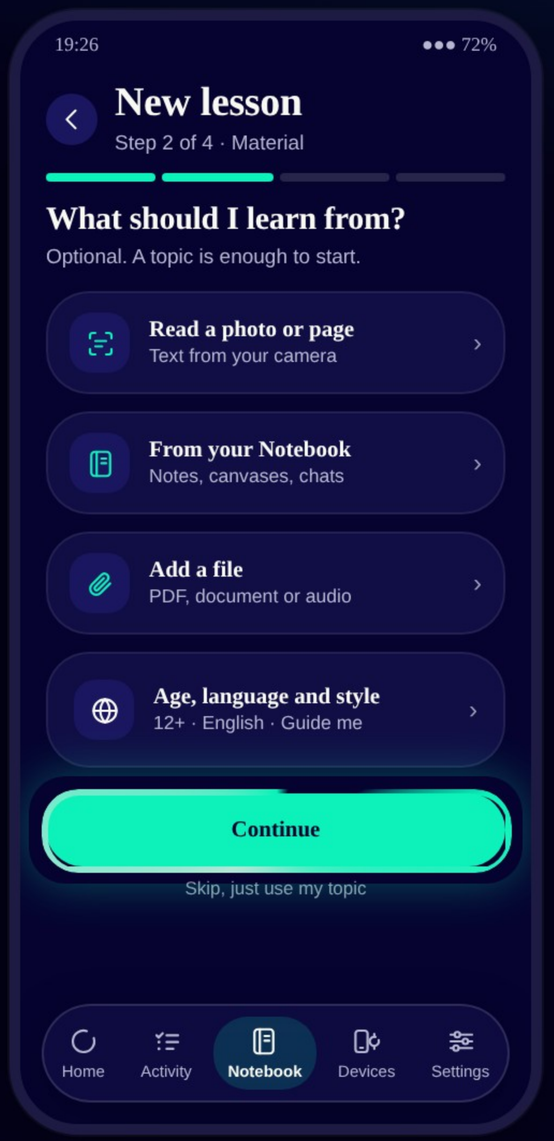

Note editor

The missing parts: find & replace as one slim bar, blocks with move / add / delete, and a floating format bar.

Canvas · More

The 8-item menu becomes one sheet. halo actions sit on top with the ring colour; view tools below.

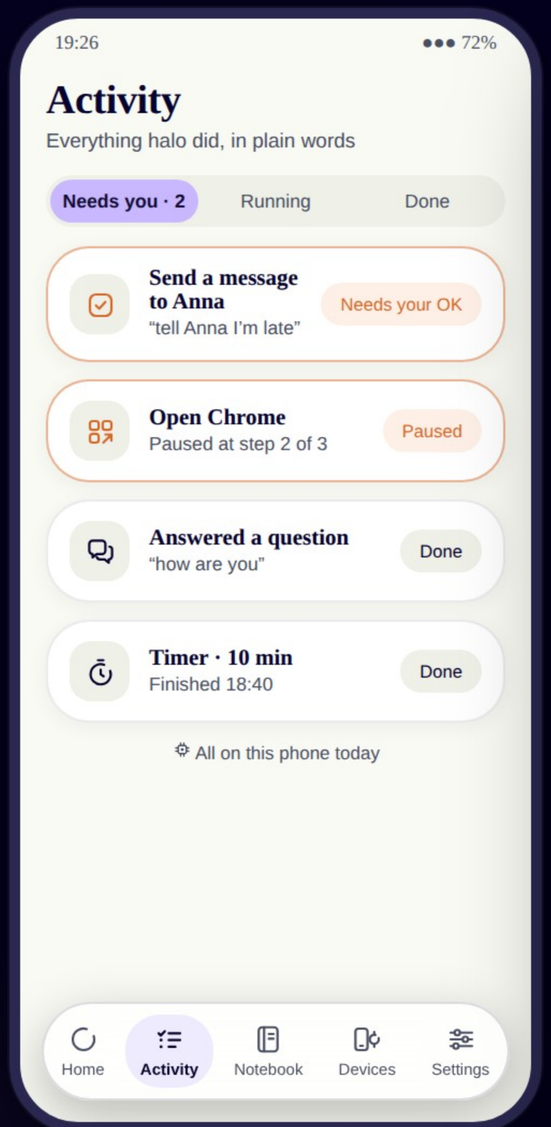

Study · material

Photo, Notebook or file, plus "Age, language and style". Continue carries the Guide.

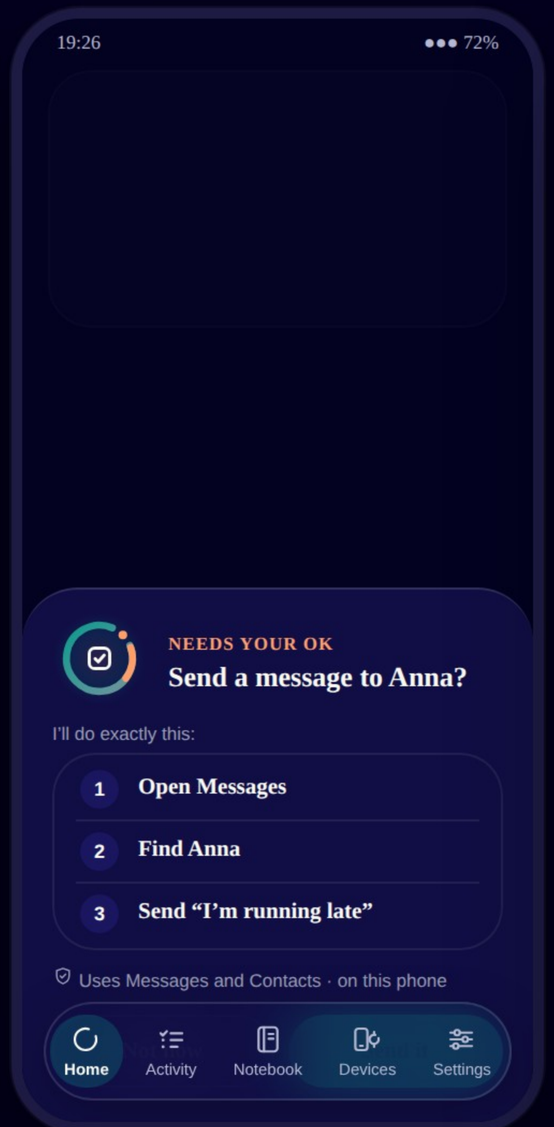

Activity, approvals and Devices

Same parts, new light: halo’s Guide shows the next step; Apricot only appears when halo really needs you.

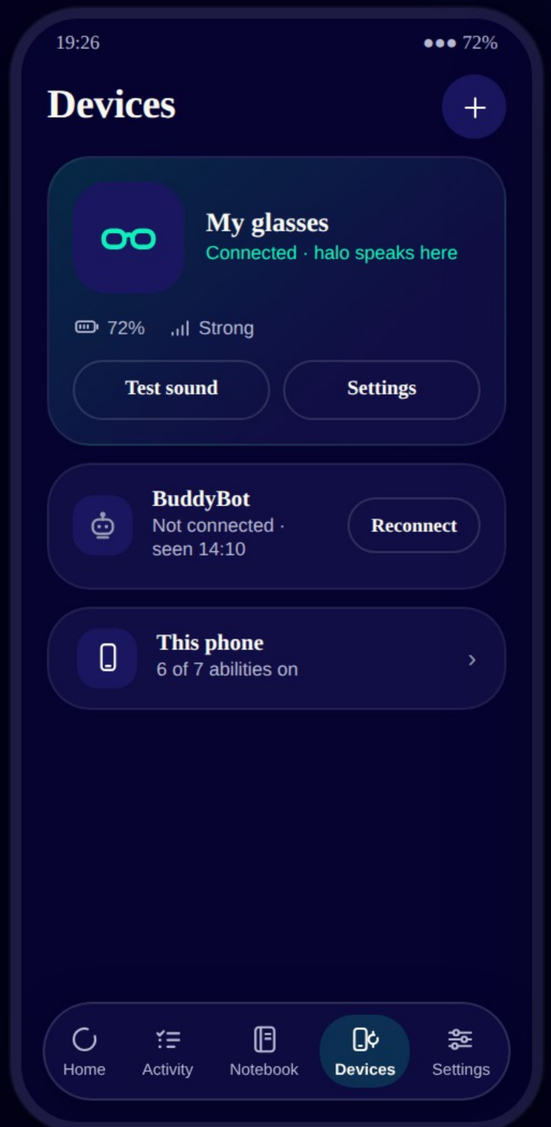

Activity · light

Needs you / Running / Done. Human titles, the user’s own words, and Apricot only where halo needs you.

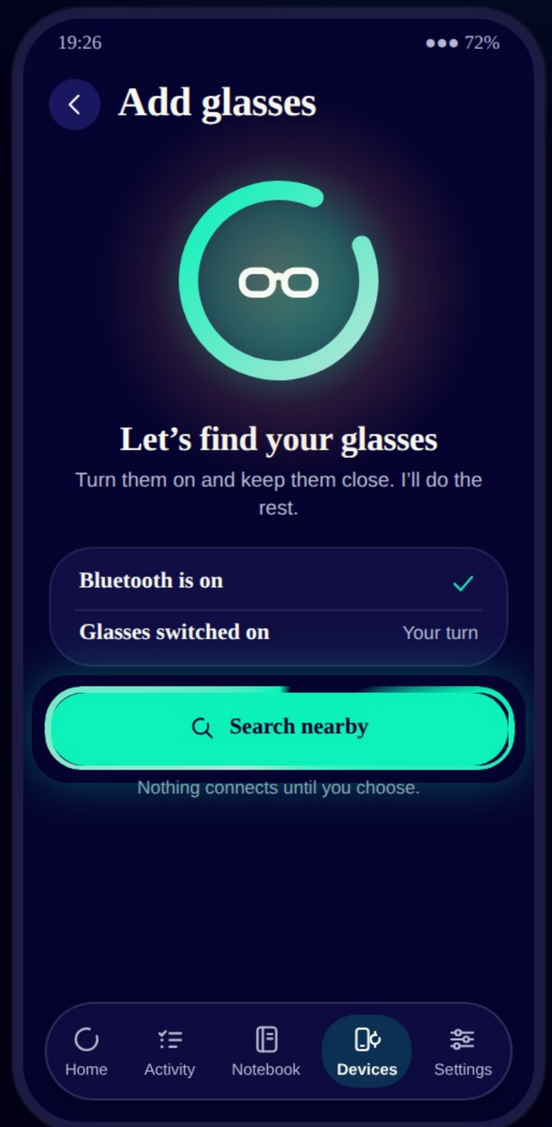

Approval

“I’ll do exactly this”, numbered. What it uses and where, then Not now / Send it. The button says the action, not “Allow”.

Devices

A hero card for the main device, with battery and signal. Not connected stays calm grey.

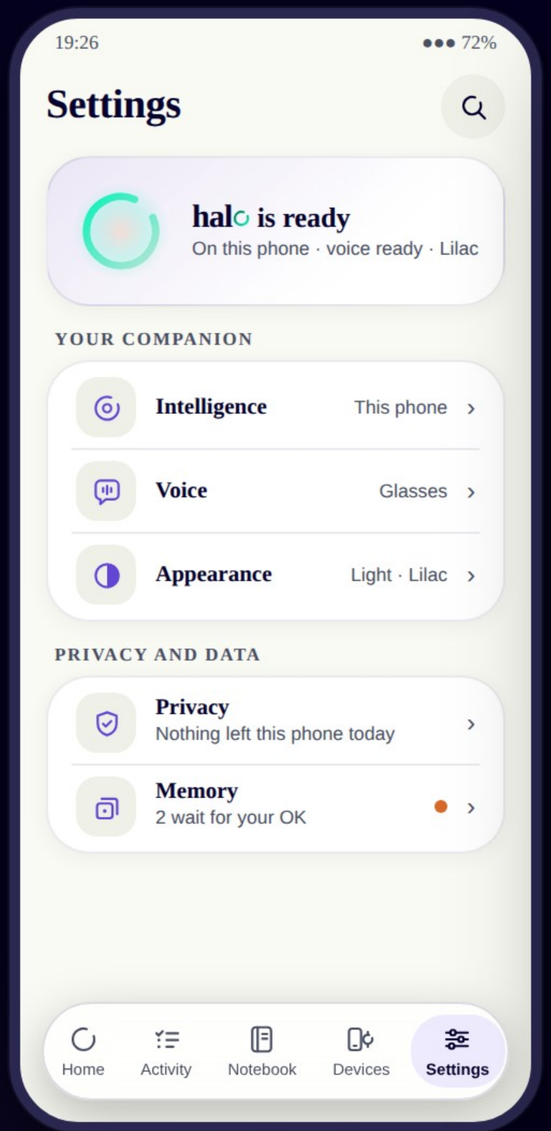

Add glasses

Aura around the device, a two-item checklist, and the Guide on Search.

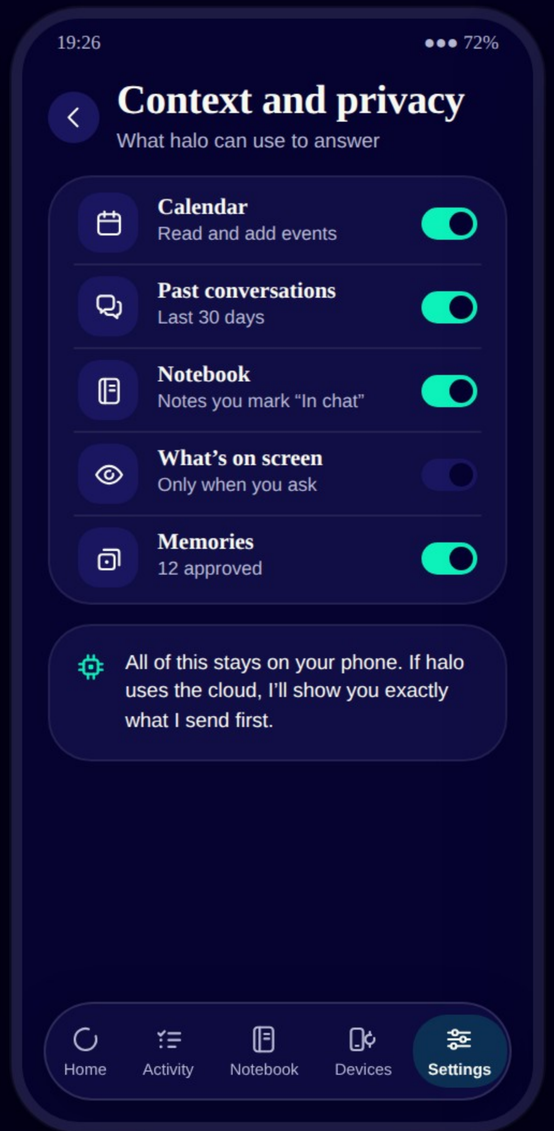

Settings, Context and the system check

Light and dark from the same parts. The Guide picks the one fix that matters; everything else just says it's fine.

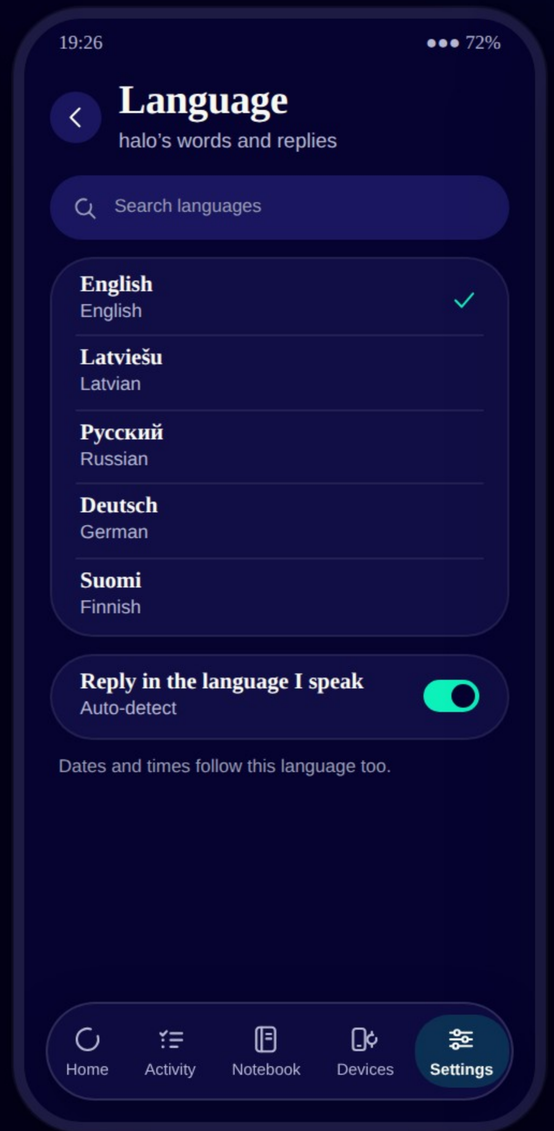

Settings · light

The lowercase wordmark in the status card, values on every row, and Memory's Apricot dot when something waits.

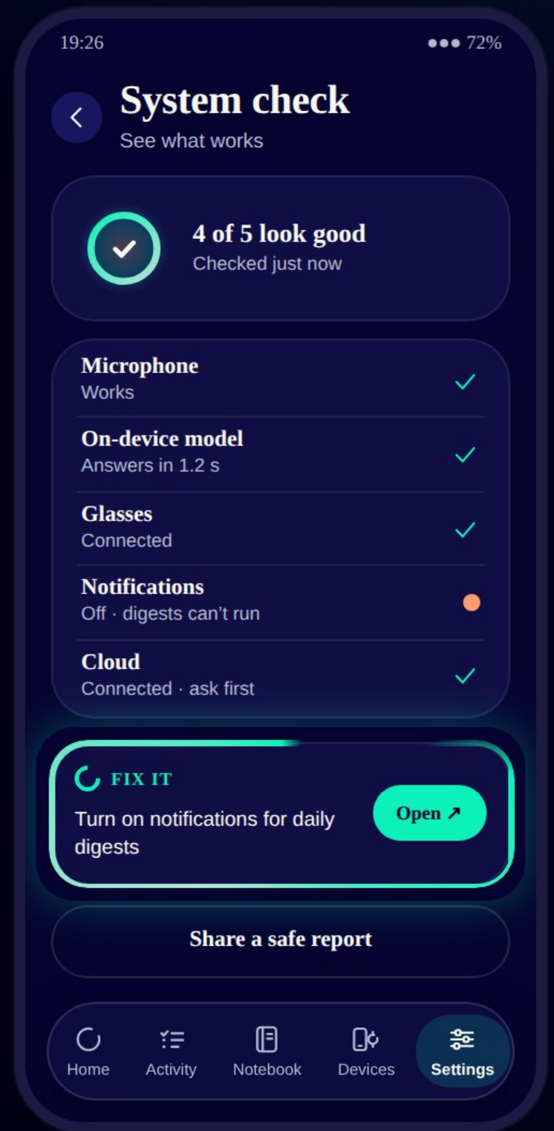

Context and privacy

From your Preferences group: plain switches for what halo can use, and a promise about the cloud.

Language

The missing picker. Native names first, auto-detect for replies, and dates that follow the language.

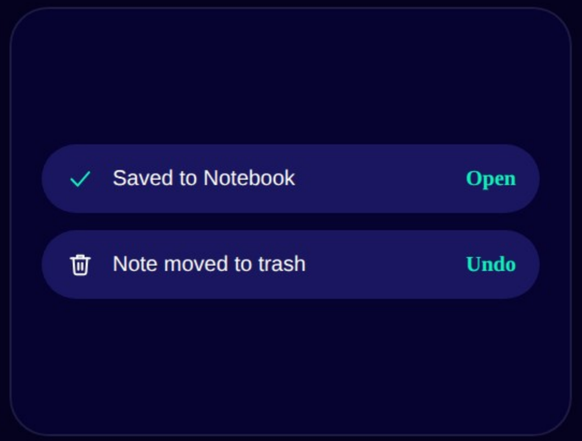

System check

A health check with one Guide: the single fix that matters. "Share a safe report" for support.

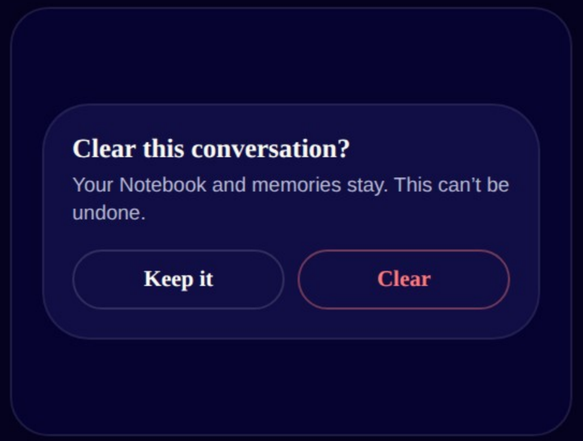

HALO · ROUND 2

The everyday parts

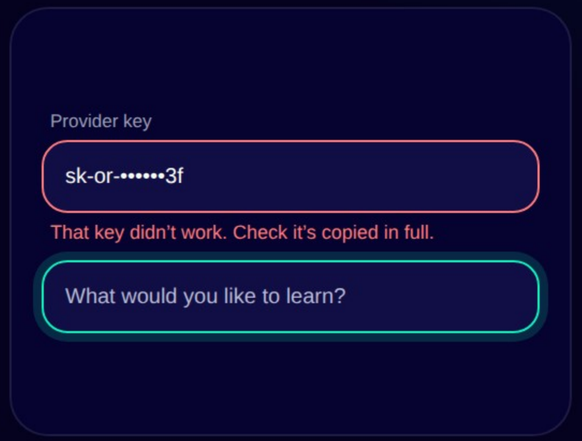

Toasts, dialogs, fields, empty and loading states, banners. Destructive actions say exactly what goes, and keep a way back.

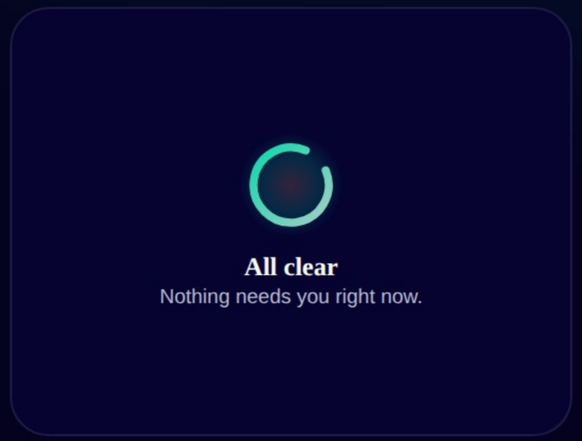

Toasts · with Undo / Open

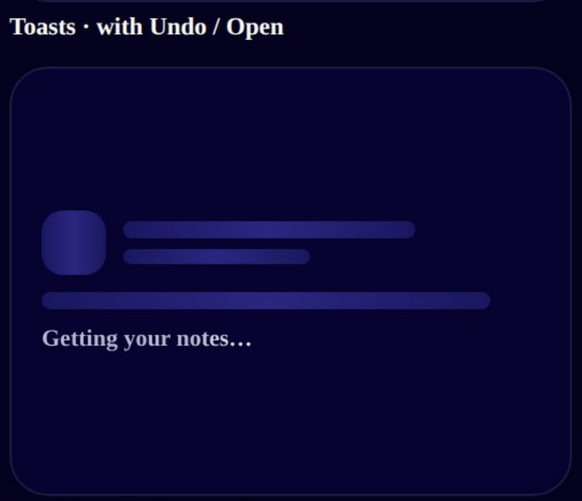

Confirm dialog

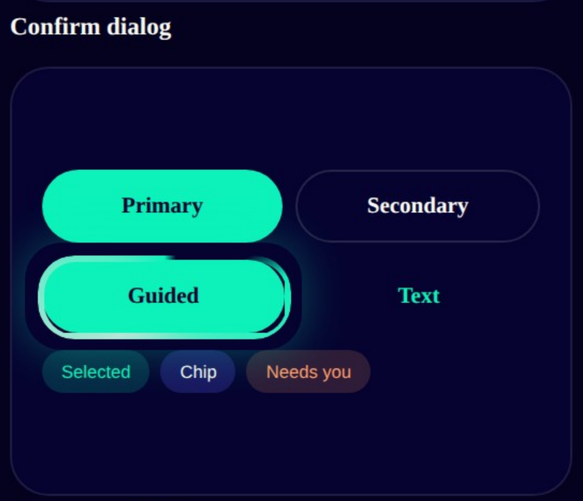

Text fields · error + focus

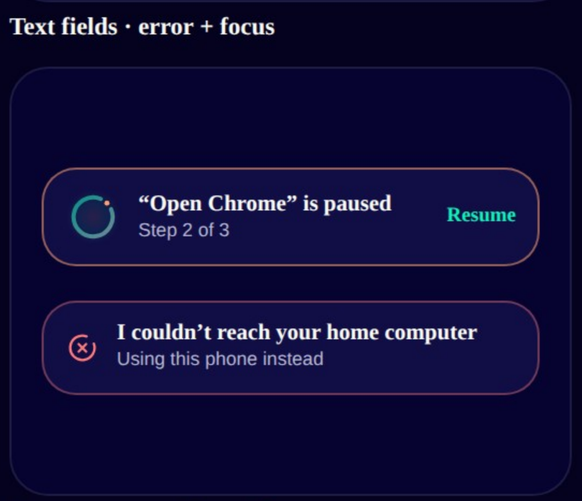

Empty state

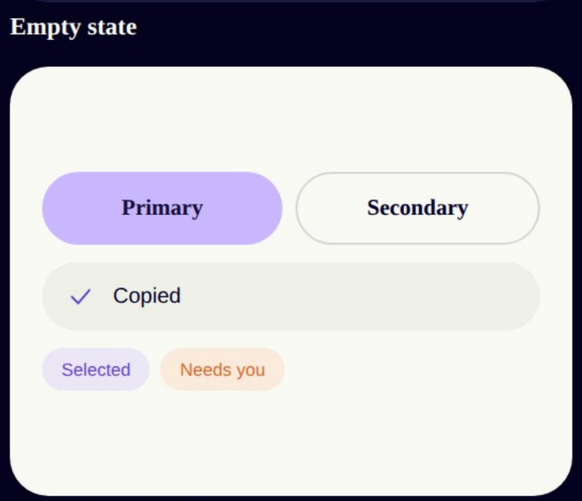

Loading · skeleton + shimmer

Buttons and chips

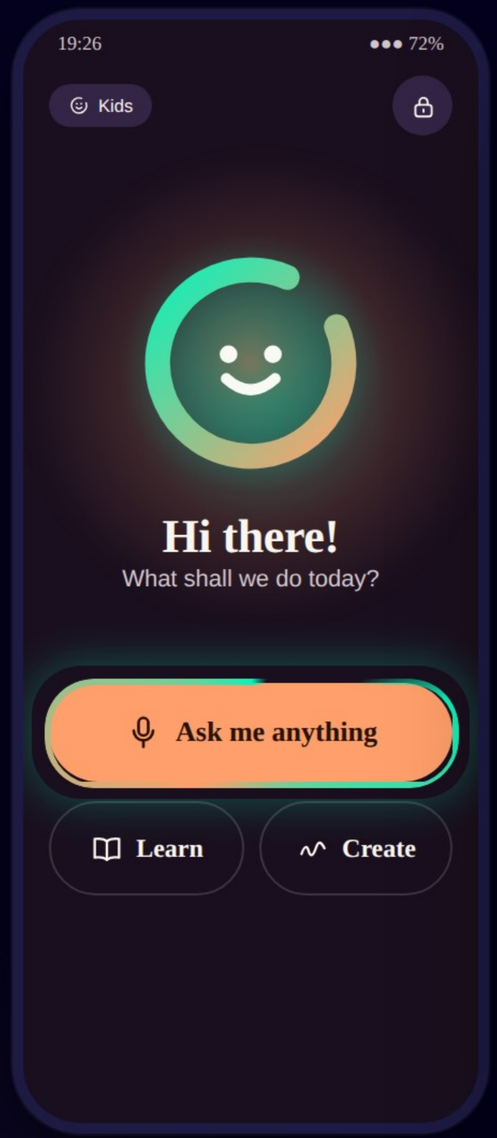

Banners · paused + problem

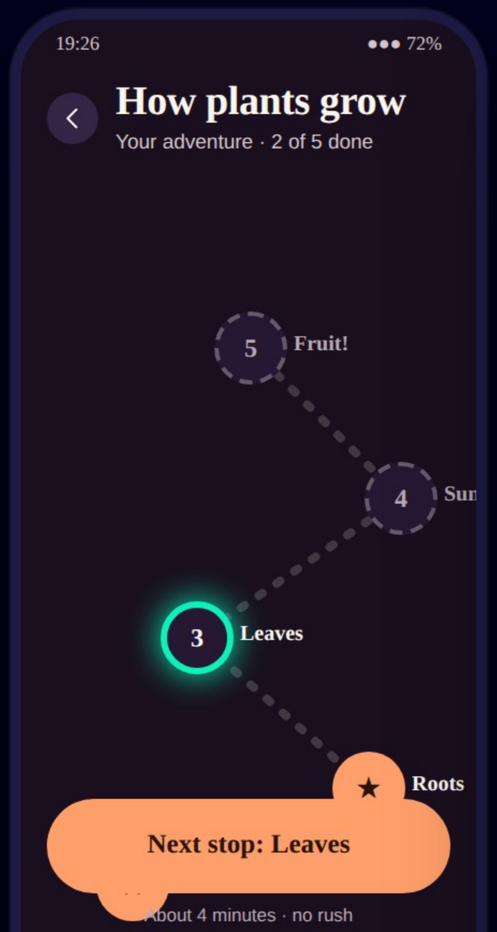

Light theme · Lilac

Kids mode 2.0: a place of their own

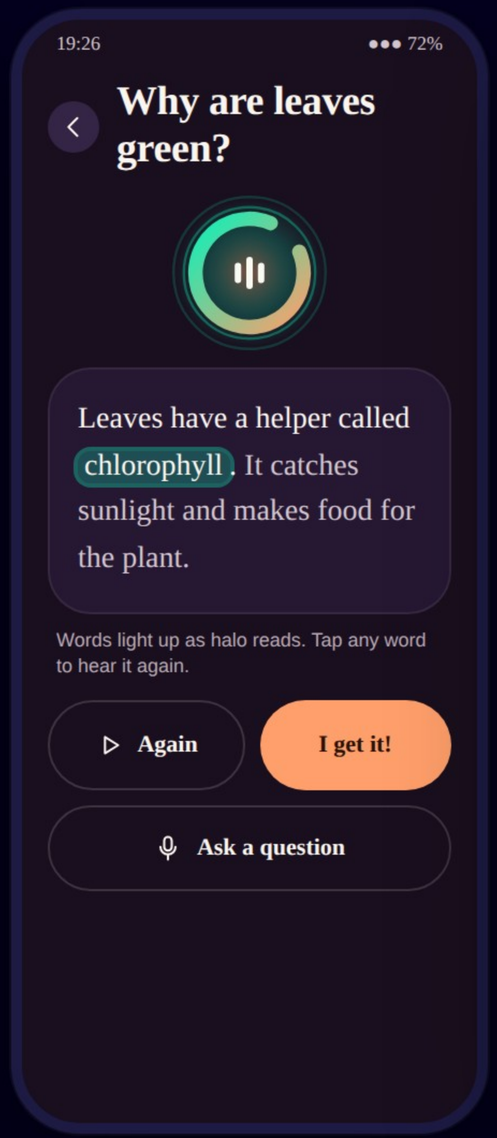

Warm tone, Mint-to-Apricot ring, 56dp+ targets, 18sp+ text, and never more than three choices. Grown-ups set the rules.

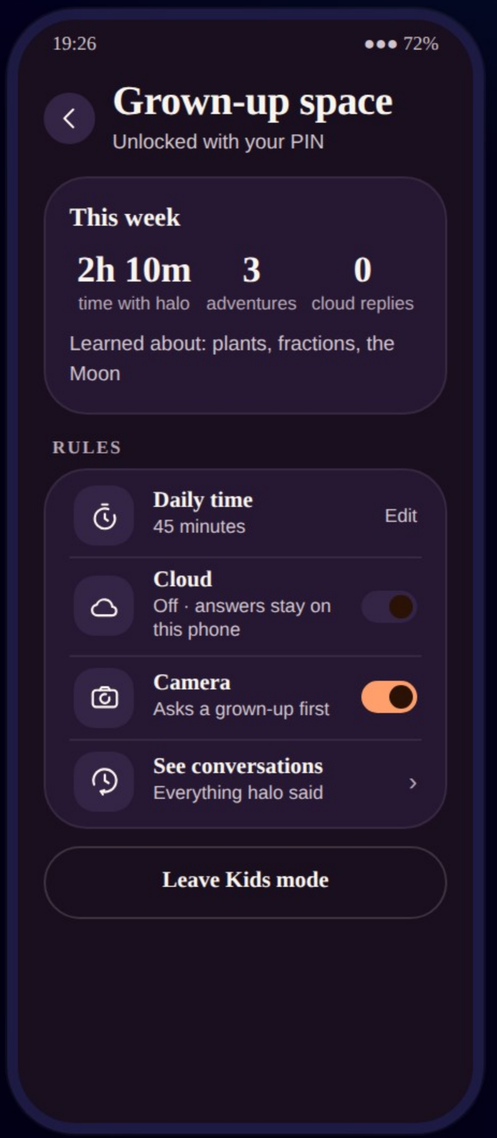

Kids home
Big, friendly orb with a smile and three choices only. Voice first. The lock top-right opens the grown-up space.

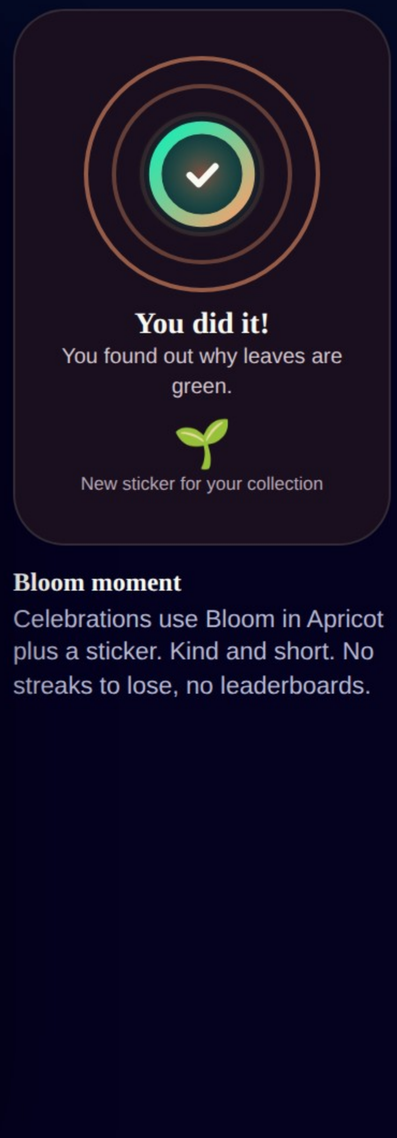

Adventures
Learning as a path of stops. Stars for what's done, a glowing ring for "now". No timers, no pressure.

Read-along
Words light up as halo speaks: support for early readers. "Again" and "I get it!" are big and clear.

Grown-up space
PIN-locked. A weekly summary, daily time, cloud off by default, camera asks a grown-up.

Bloom moment
Celebrations use Bloom in Apricot plus a sticker. Kind and short. No streaks to lose, no leaderboards.

HALO · ROUND 2

halo FX: a light that means something

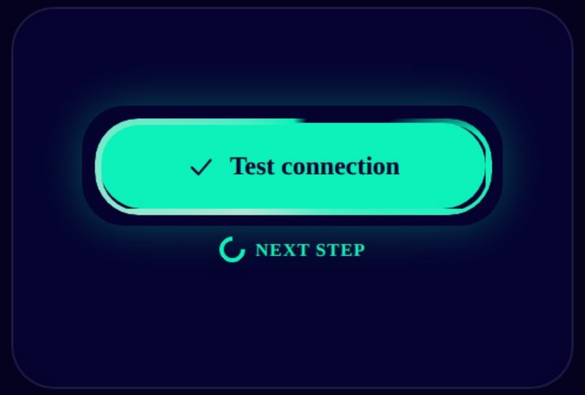

Six effects, all made from the Open Ring. When halo's light moves, something real is happening.

Aura

halo's presence. A soft Mint-to-Apricot glow behind the orb and hero moments.

Radial, 2× element size, 40% → 0. Breathes with IDLE (4s). One per screen.

Trace

The Guide. A soft glow breathes around the one next step.

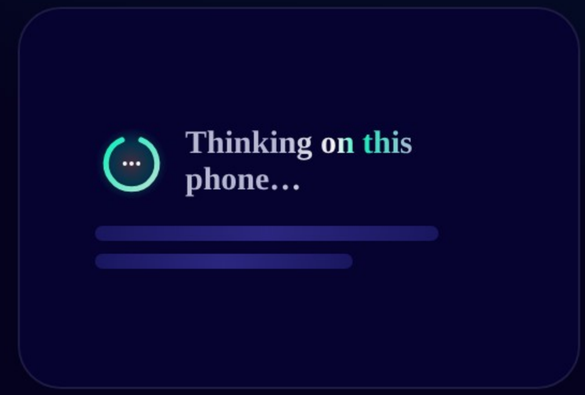

Stroke 2.5dp, gap 30° fixed upper right, pulse 2.4s. One lap only the first time.

Edge glow

halo is acting on your phone. The screen edge breathes, so you always know.

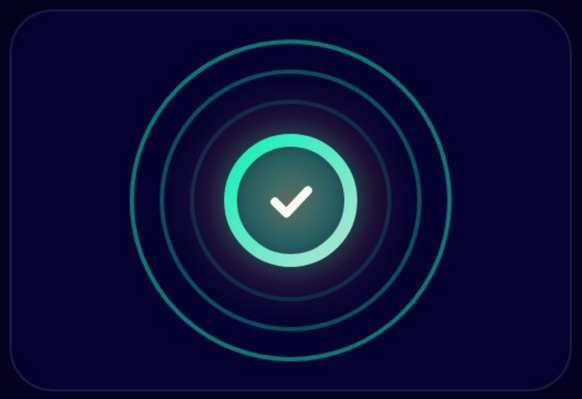

Pulse 2.4s, no rotation. On only while acting; stops the instant halo does.

Shimmer

halo is thinking or writing. Text and placeholders shimmer, never spin.

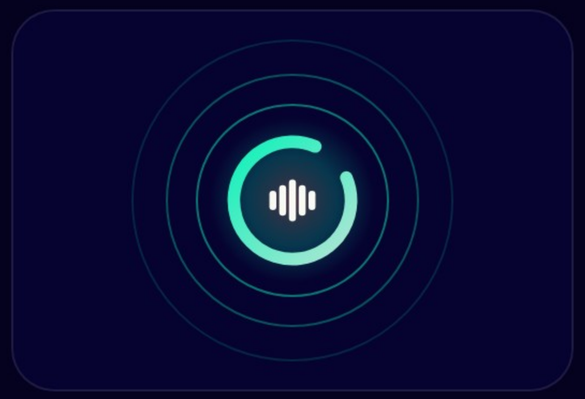

Gradient sweep 1.6s left→right. Skeleton lines for anything loading.

Bloom

Done. The ring closes and light blooms outward once.

3 rings, 0.6s, ease-out, play once. Pairs with a light haptic.

Ripple

halo is listening. Rings move with your voice.

Driven by mic level. Shown only while the mic is truly open.

One light at a time
Aura or Trace, never both competing. The orb doesn't count.

Light means something
Each effect maps to one state. No decoration-only glow.

Follows your theme
Uses the accent ring colours: Mint, Blue, Lilac or Coral. Apricot stays "needs you".

Breathe first, rotate rarely
Only Thinking orbits. Reduced motion: static glow, no movement.

HALO FX · MOTION v2

Breathe first, rotate rarely

Edge and Guide now pulse. New moments for startup, waking halo, using tools, remembering, the cloud and devices.

Edge pulse

Breathes every 2.4 s while halo acts. No rotation.

Guide pulse

The resting Guide: the next step glows softly. One lap only on first appearance.

Startup

The ring draws, then “hal” arrives. 1.8 s.

Summon

Side button or “Talk”: light gathers into halo. 0.8 s.

Tool use

The gap opens, the tool steps in, the ring closes when done.

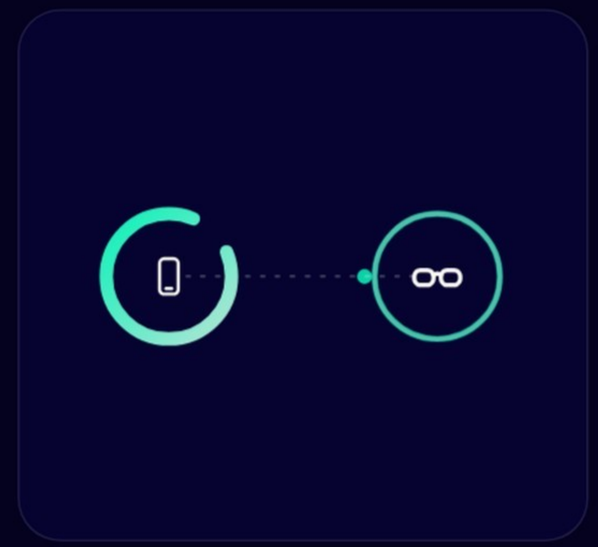

Remember

A thought drifts into the gap and is kept.

Cloud handoff

Shows a message leaving for the cloud and coming back.

Device connect

Pulses travel while connecting, the line lights up when done.

HALO · MOTION

Where halo moves

Every moment in the app that earns motion, all 20 now built.

- **Startup** · Splash
  Ring draws, “hal” arrives, aura settles
- **Listening** · Ripple
  Rings move with your voice
- **Using a tool** · Tool use ×6
  Gap opens, tool steps in, ring closes when done
- **Needs your OK** · Waiting
  Apricot dot breathes in the gap
- **Remembering** · Remember
  A thought drifts into the gap and is kept
- **Pairing a device** · Device connect
  Pulses travel, the link lights up
- **Pull to refresh** · Ring draw
  The ring draws as you pull, closes on release
- **halo writes a draft** · Draft draw-on
  Dashed Mint border draws around the new card
- **Theme change** · Accent sweep
  New accent sweeps through the ring
- **Kids: right answer** · Bloom · Kids
  Apricot bloom + a sticker drops in
- **Wake / summon** · Summon
  Light gathers into halo from the side button or Talk
- **Thinking** · Orbit
  The gap orbits. The ONE place rotation lives
- **Acting on the phone** · Edge pulse
  Screen edge breathes, steps tick off
- **Done** · Bloom
  Ring closes, light blooms once
- **Using the cloud** · Cloud handoff
  A message visibly leaves and comes back
- **Next step** · Guide pulse
  The Guide glows softly; one lap on first appearance
- **Model download** · Progress ring
  Ring fills like a progress arc
- **Tidy the canvas** · Arrange
  Cards glide into place, groups breathe once
- **Screen to screen** · Shared orb
  The orb travels between screens as one object
- **Kids: read-along** · Word glow
  Each word glows as halo says it

MOTION RULES V2

Breathe first
Most light pulses at 2.4 s, the pace of calm breathing.

Rotate rarely
Only Thinking orbits. The Guide may do one lap the first time, then rests.

Every motion = a state
If nothing is happening, nothing moves.

Short and done
Moments play once in under 2 s. Only waiting states loop.

Always honest
Ripple only with the mic open, edge only while acting, cloud handoff every time the cloud is used.

Reduced motion
Each animation has a still version.

All built

HALO FX · MOTION v2.1

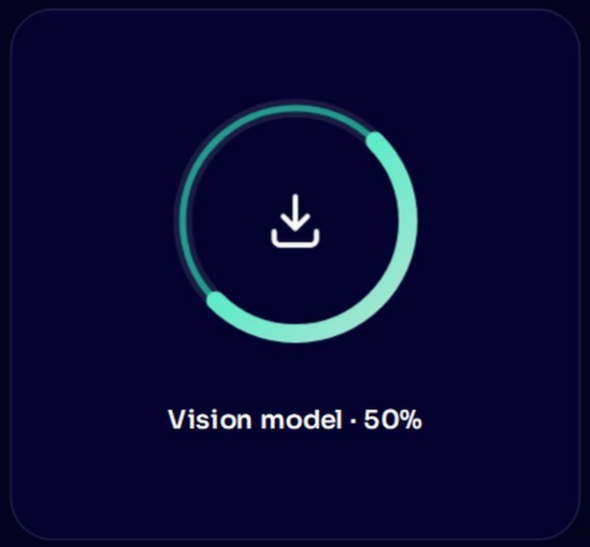

The last seven moments

Every candidate from the motion map, now built. All breathe or glide; none spin.

Pull to refresh

The ring draws as you pull, closes on release, breathes while it loads.

Model download

The ring fills with real progress, then closes into a check.

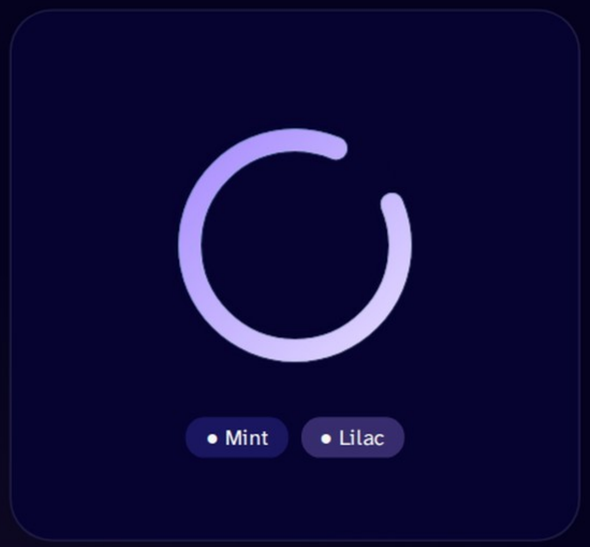

Draft draw-on

halo's new card draws its dashed border, then fills in.

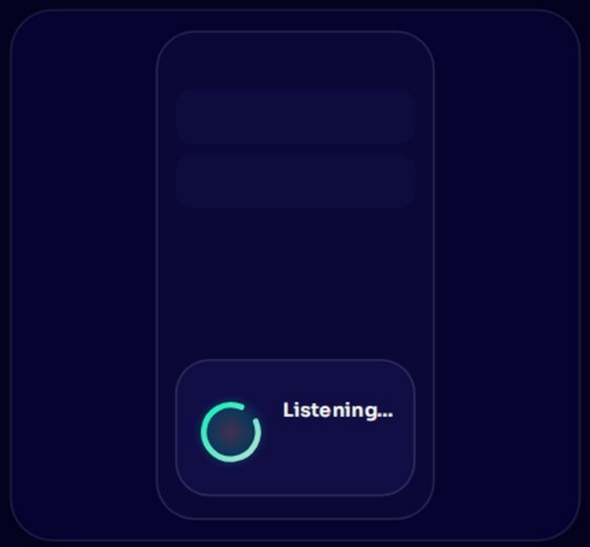

Tidy the canvas

Cards glide into place; the new group breathes once.

Accent sweep

Pick a new accent and it sweeps in from the gap.

Shared orb

The orb travels between screens as one object, never cut.

Kids read-along

Each word glows as halo says it, synced to the voice.

Driven by real data
Pull distance, download %, voice timing.

Glide, don't bounce
Ease 0.2/0/0/1, 0.6–0.9 s.

One moving thing
The rest of the screen holds still.

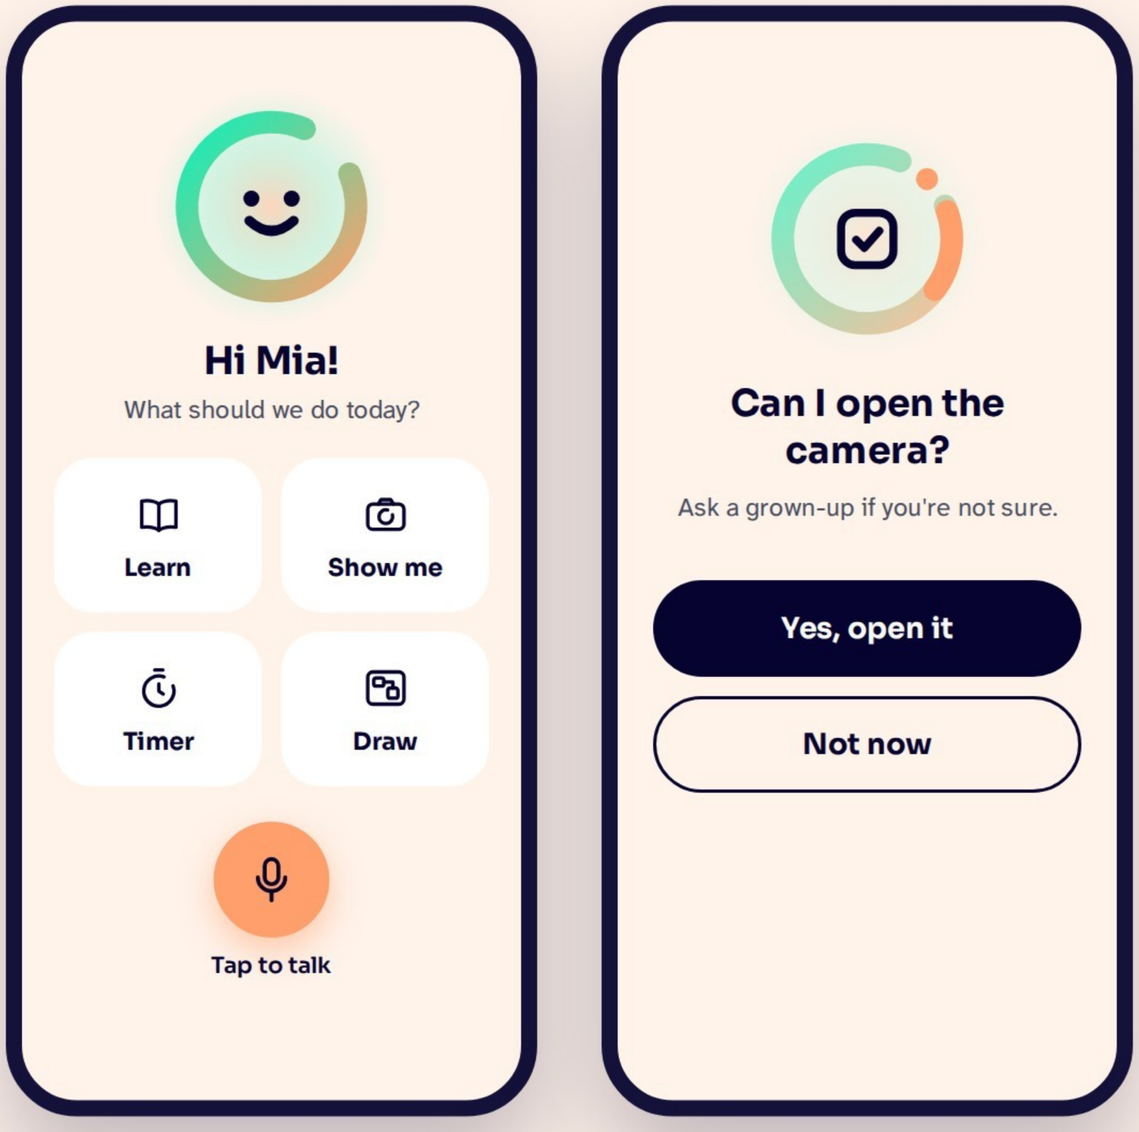

Rules for these

Same system: breathe first, rotate rarely.

ROUND 1 · VISUALS REPLACED BY PAGE 43

KIDS MODE · 02

Built for small hands.

Kids home

Grown-up check

Touch targets
56dp minimum, 72dp for the main mic button. Never two small buttons side by side.

Type
Body 18sp+, titles Sora 700 at 24sp+. One idea per screen, max 3 choices.

Color
Apricot leads for warmth and the main action. Text stays Night Ink on Cream: Apricot is never text on light.

Words
Short, kind and concrete. "Let's try again", never error codes. Say who decides: "Ask a grown-up".

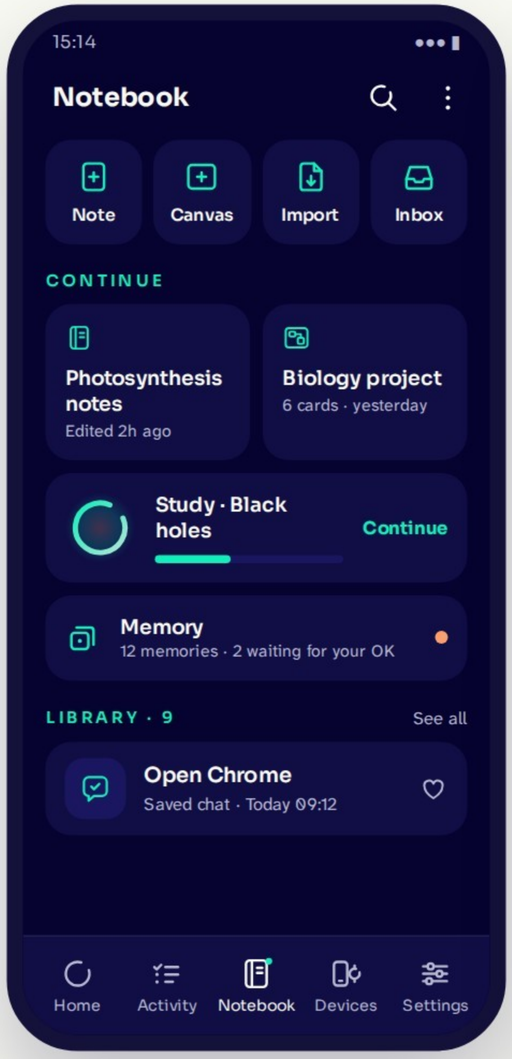

Safety
Phone actions, camera and new permissions always ask. Provider, model and advanced settings are hidden behind a parent lock.

Honesty
Same rules as adult Halo: the mic and camera indicators show only while they're truly on.

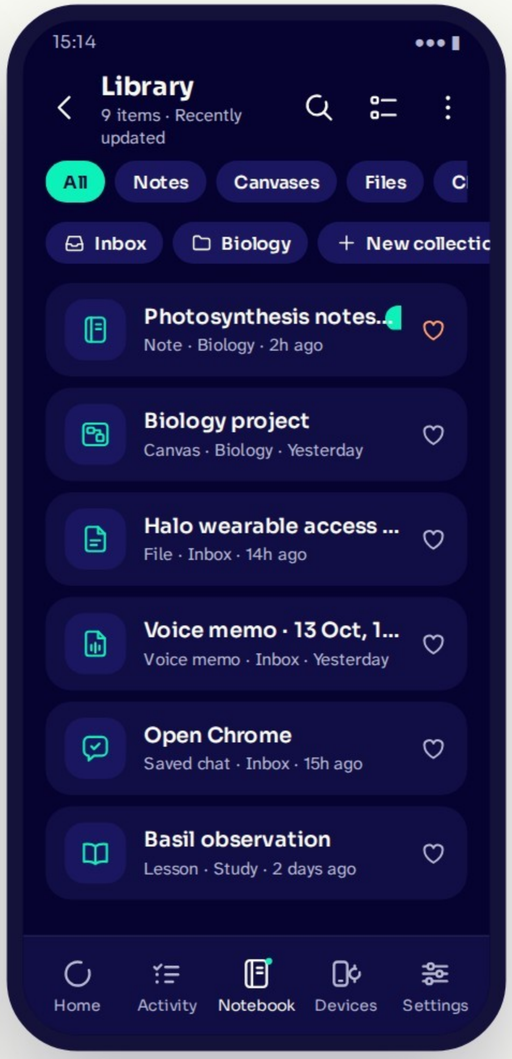

NOTEBOOK & TOOLS · 02

Notebook hub & Library

The hub becomes a launchpad: create in one tap, continue where you left off, and see Study and Memory at a glance. Skills moves out to Settings.

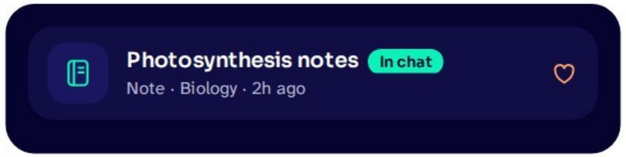

Notebook hub

Library

LIBRARY ITEM ANATOMY

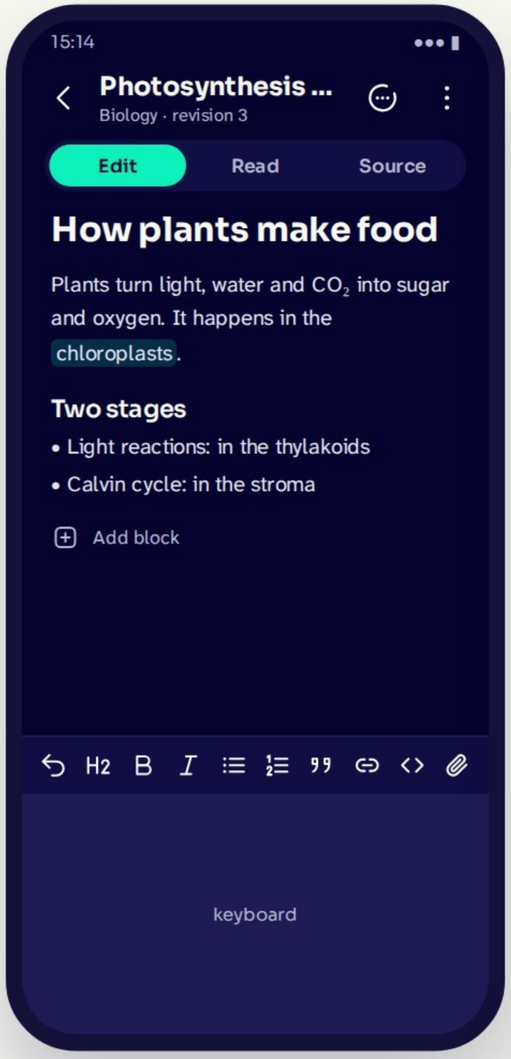

- **Type tile:** 38dp, Mint icon on Surface 2. The type is readable without color.
- **Title:** Sora 600/13, one line. Never “Untitled”: use the first line, file name cleaned up, or “Voice memo · date”.
- **Meta:** type · collection · time, in the app language.
- **“In chat”:** Mint pill when the item is attached to the current conversation (was “Context”).
- **Favorite:** Apricot heart on dark only.
- **Long-press:** multi-select; swipe left: archive.

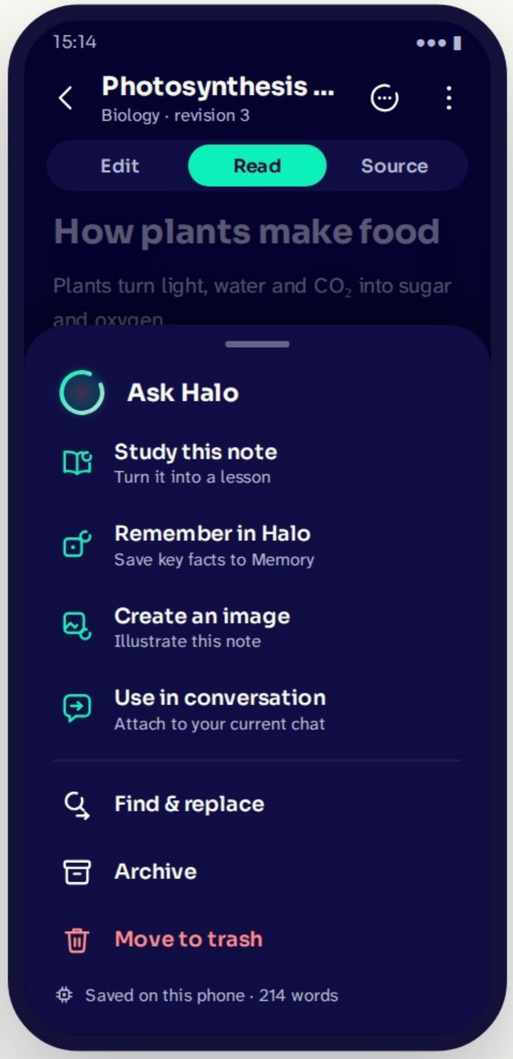

NOTEBOOK & TOOLS · 03

Note editor

Writing first. Tools appear where the hands are, and Halo's help lives in one place with one marker.

Edit mode

Ask Halo sheet

EDITOR RULES

Top bar: back · title + collection/revision · **Think with Halo** (ring with dots) · more.

Mode switch: Edit / Read / Source as one segmented control. Read hides all tools.

Formatting bar sits on the keyboard, only while editing: undo · heading · bold · italic · bullets · numbers · quote · link · code · attach. Paragraph style lives in the heading button.

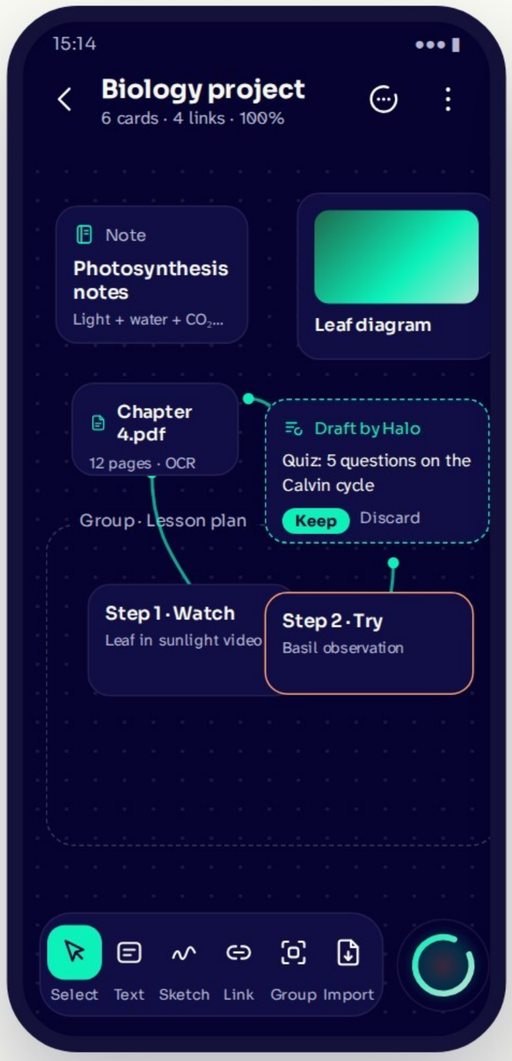

Ask Halo sheet: every AI action wears the open-ring marker, so people always know what Halo will touch. File actions sit below a divider; trash is the only warm-red row and asks to confirm.

Status: "Saved on this phone" with the on-device icon, words, revision. Honest and always visible in the sheet and Read mode.

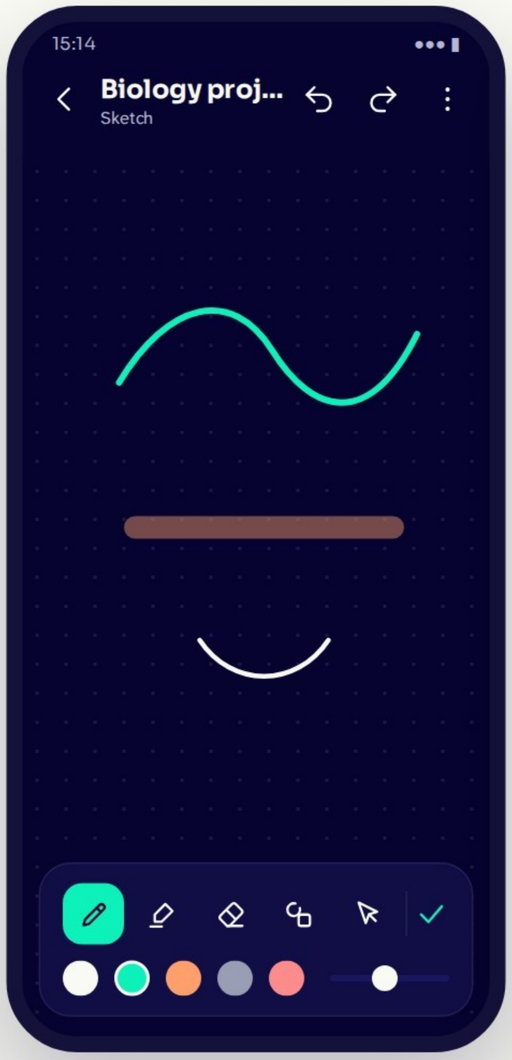

NOTEBOOK & TOOLS · 04

Canvas

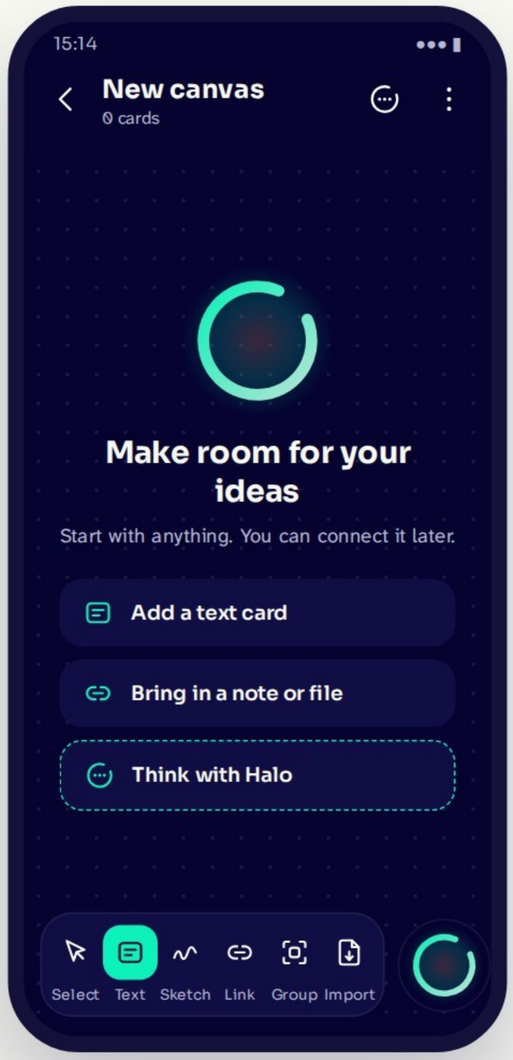

One dock for every tool, Halo one tap away. Card types read at a glance: notes, images, files, groups, and Halo drafts with a dashed Mint border until you keep them. Connections end in Mint dots.

Canvas · cards, groups, links

Sketch mode

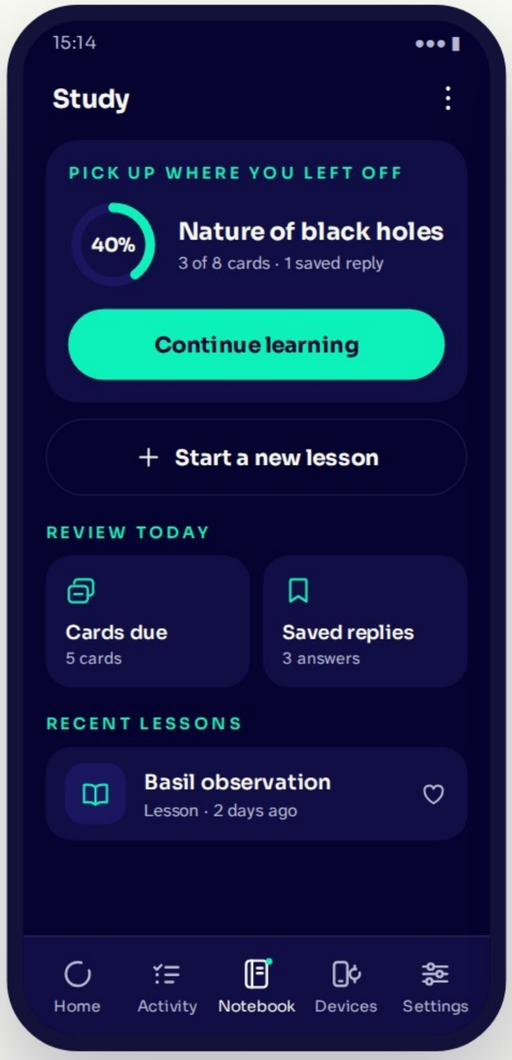

Empty canvas

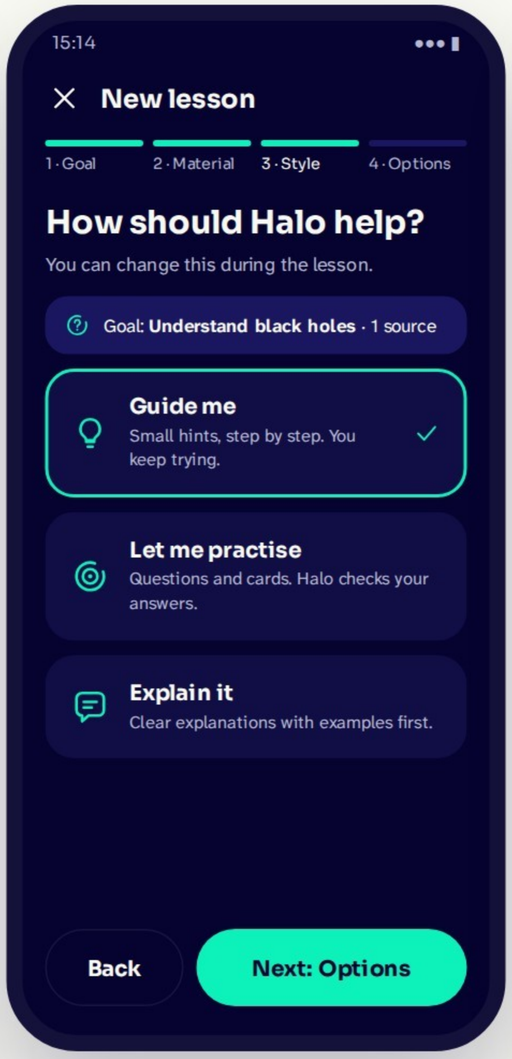

NOTEBOOK & TOOLS · 05

Study

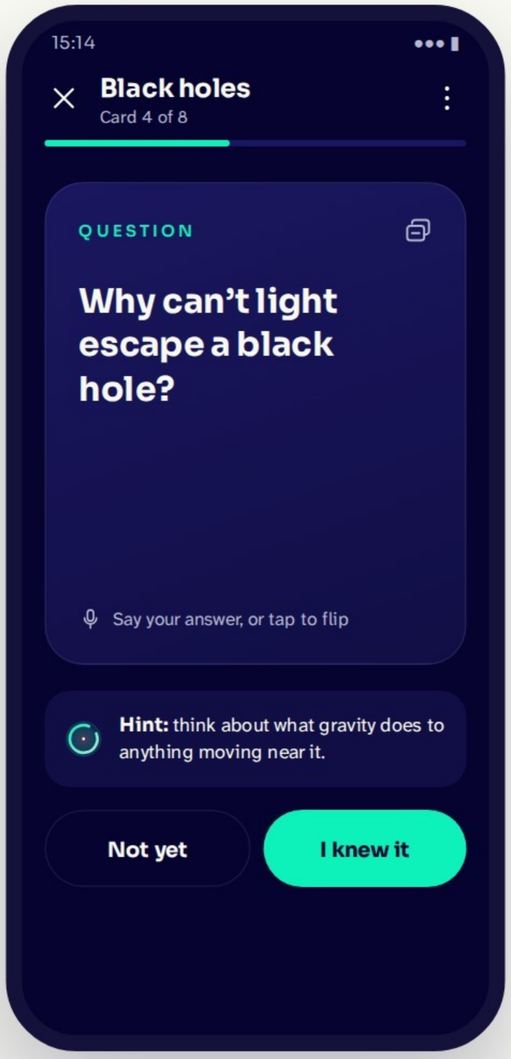

Continue first, then start new. The long setup form becomes a 4-step stepper, and practice cards keep Halo beside you: voice answers, gentle hints, two honest buttons.

HALO'S TOOLS · 02

Home: the conversation

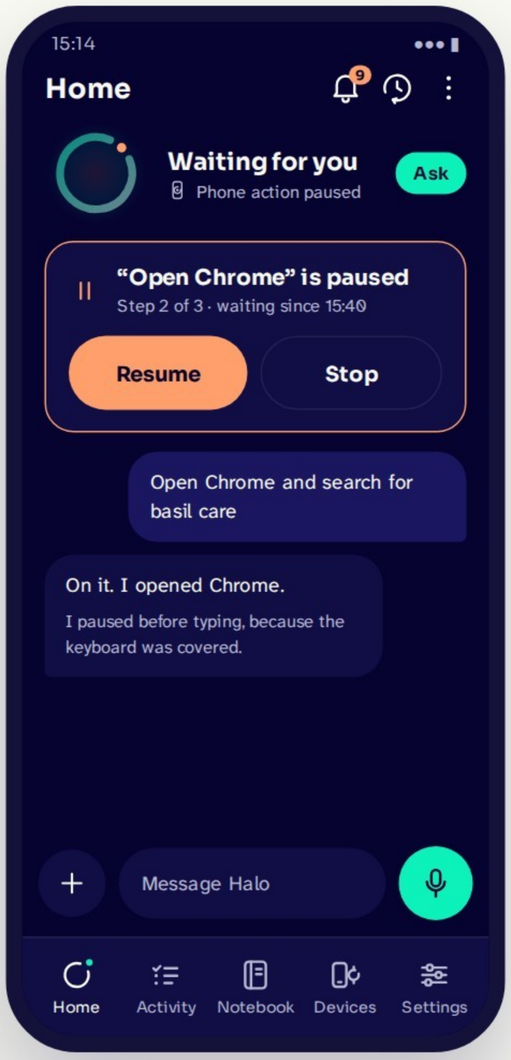

Home becomes a real chat with Halo's presence on top: state, where it's thinking, and an Ask / Act switch. Tools live behind "+", chat actions in the menu, and a paused task gets one clear banner with an Apricot edge.

Home · conversation

"+" tools & attachments

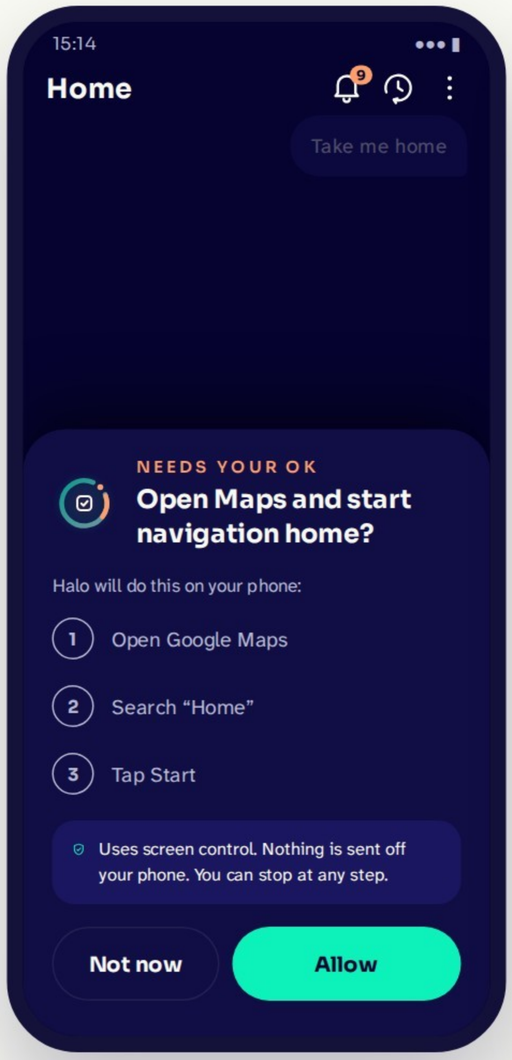

Paused task

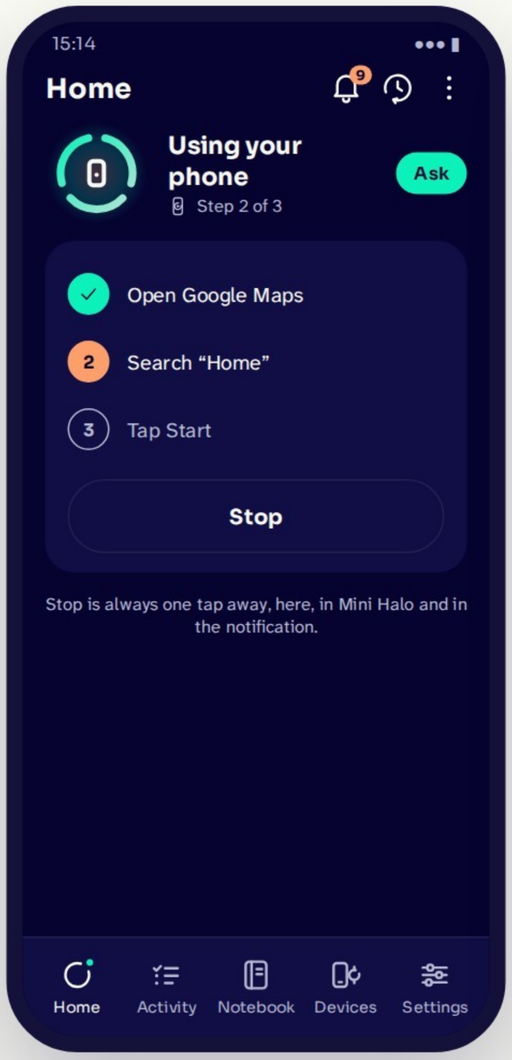

HALO'S TOOLS · 03

Approve, act, recover

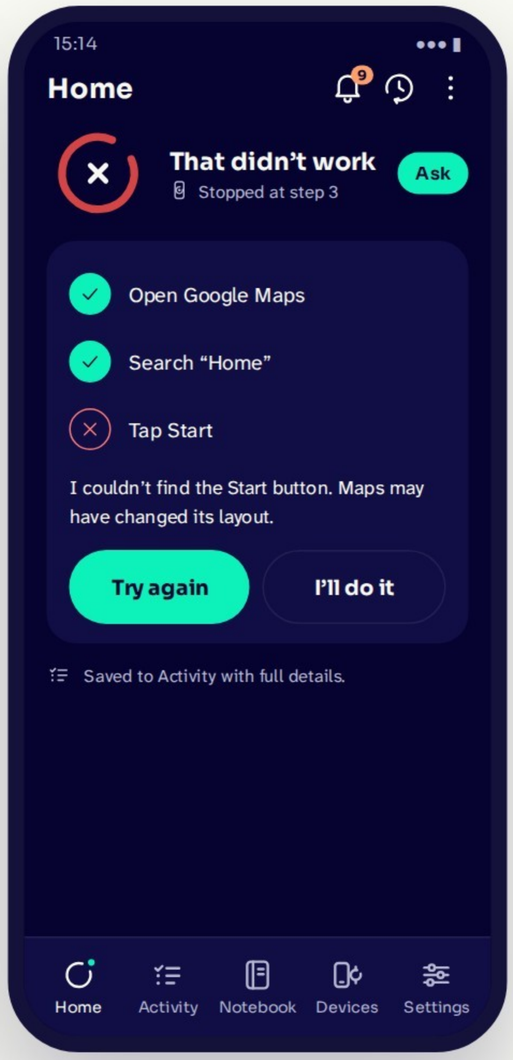

Before a phone action, Halo shows the exact steps and what it will touch. While it works, the steps tick off with Stop always visible. When it fails, it says what happened in plain words and offers a way forward.

Approval sheet

Action running

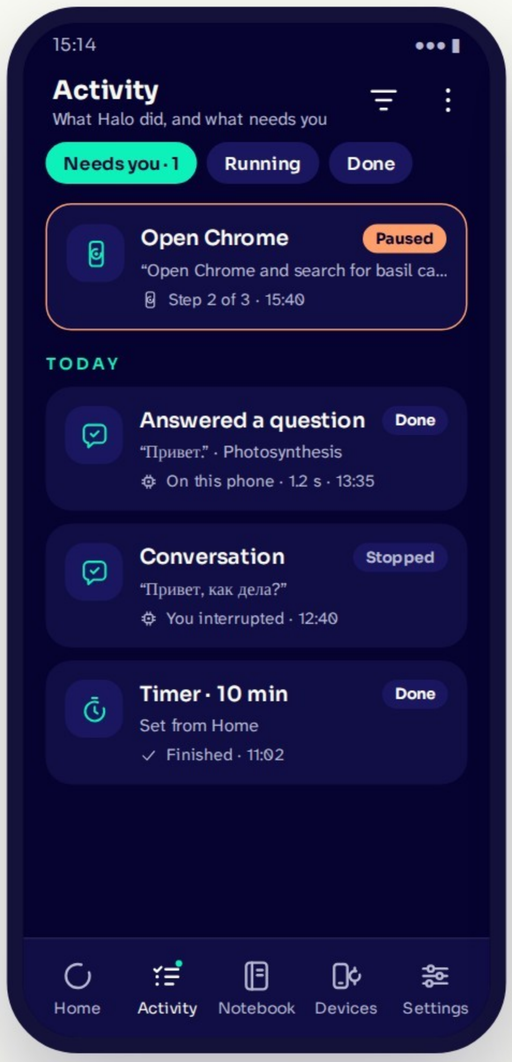

Failure & recovery

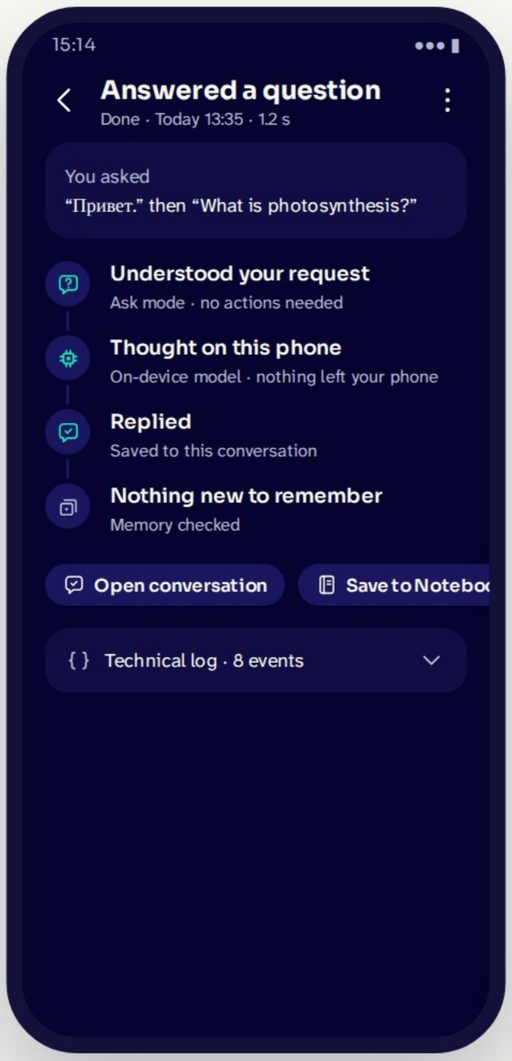

HALO'S TOOLS · 04

Activity: what Halo did

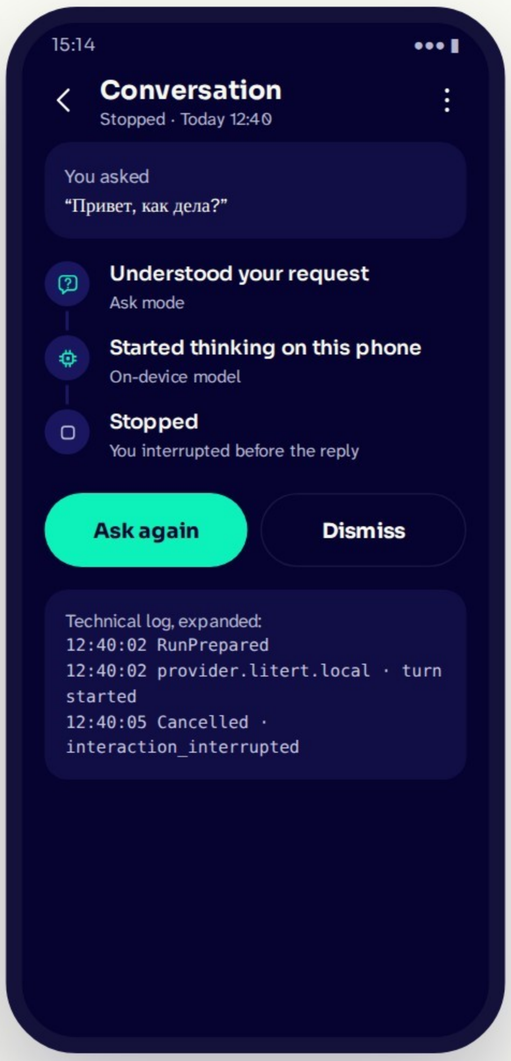

Three tabs (Needs you · Running · Done). Each run gets a human title, a status chip, where it ran and how long it took. Details tell the story in four steps; the raw log stays one tap away for developers and curious testers.

Activity list

Run details

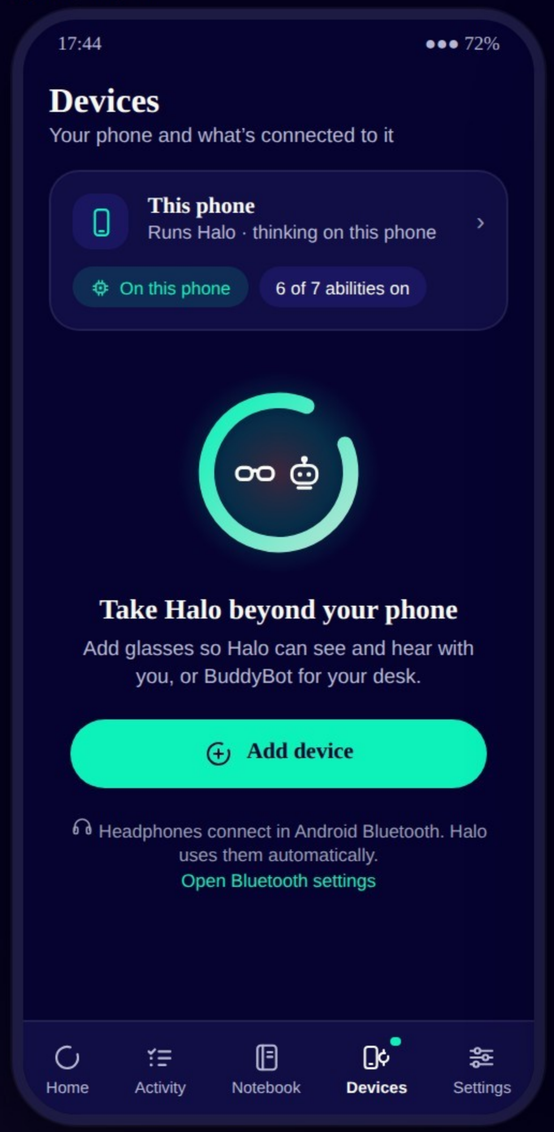

Stopped run · log open

ROUND 1 · VISUALS REPLACED BY PAGE 40

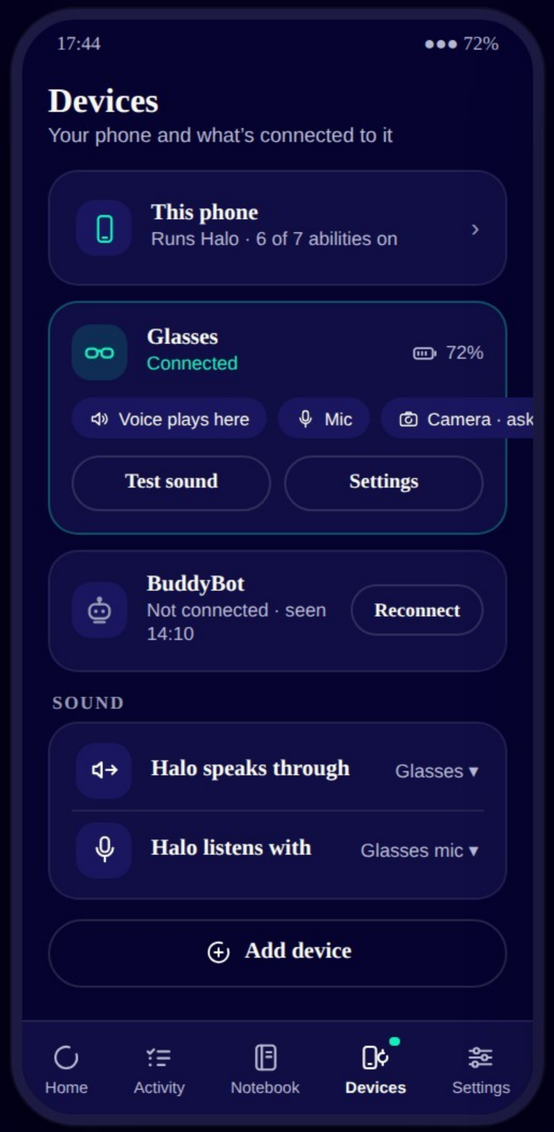

Devices: one place for everything Halo works with

The Devices tab answers three questions at a glance: what's connected, is it working, and where does Halo's voice come from.

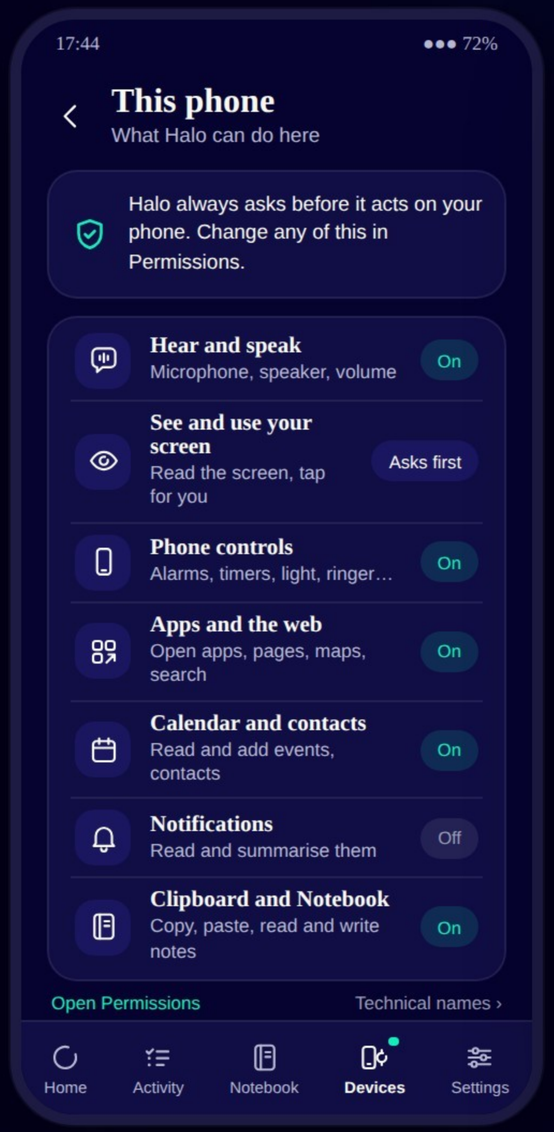

Devices · first run

"This phone" shows where Halo thinks and how much it can do. The empty state sells the why, and headphones get a real link.

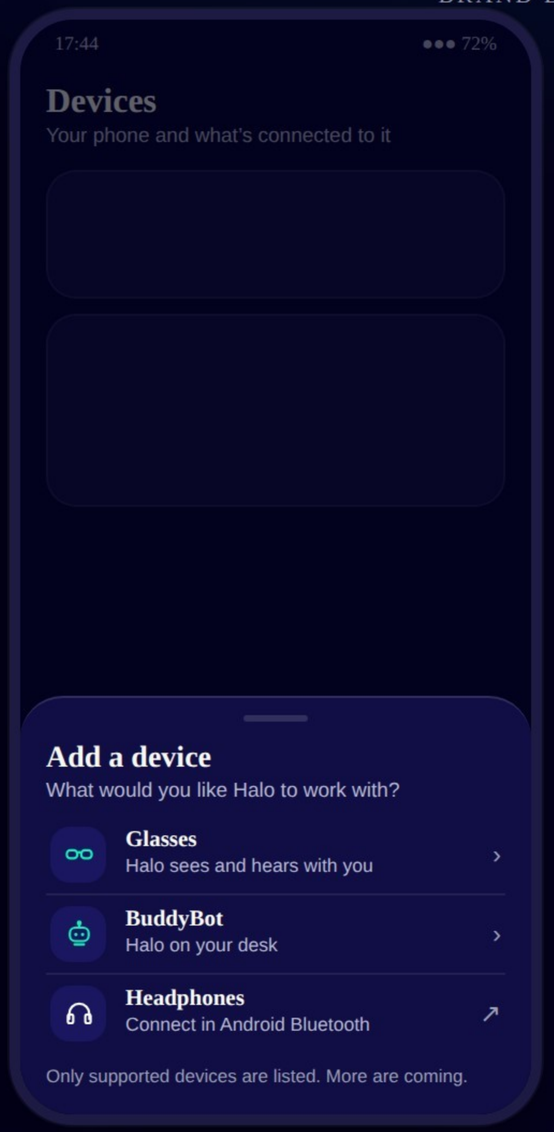

Devices · connected

Each device shows state, battery and what it's doing for Halo. Not connected is calm grey, never red. Sound routing lives here too.

This phone · abilities

The 33 internal names become 7 abilities with on / asks first / off. The raw list stays one tap away for developers.

Add device

One chooser for glasses, BuddyBot and headphones. Headphones hand off to Android with an ↗ so it's clear you're leaving Halo.

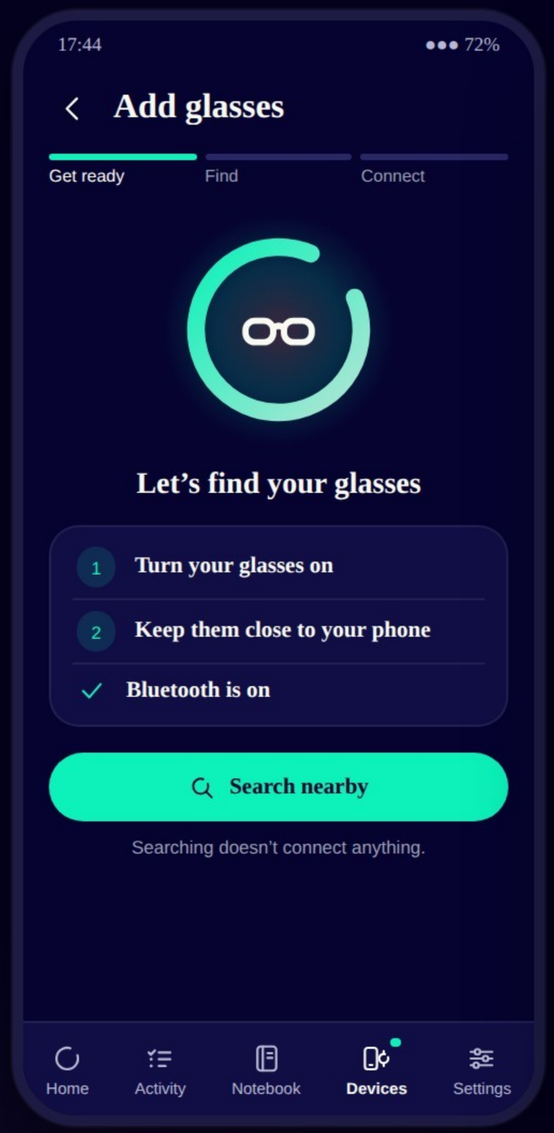

HALO · DEVICES

ROUND 1 · VISUALS REPLACED BY PAGE 36

Pairing glasses: three steps, no guesswork

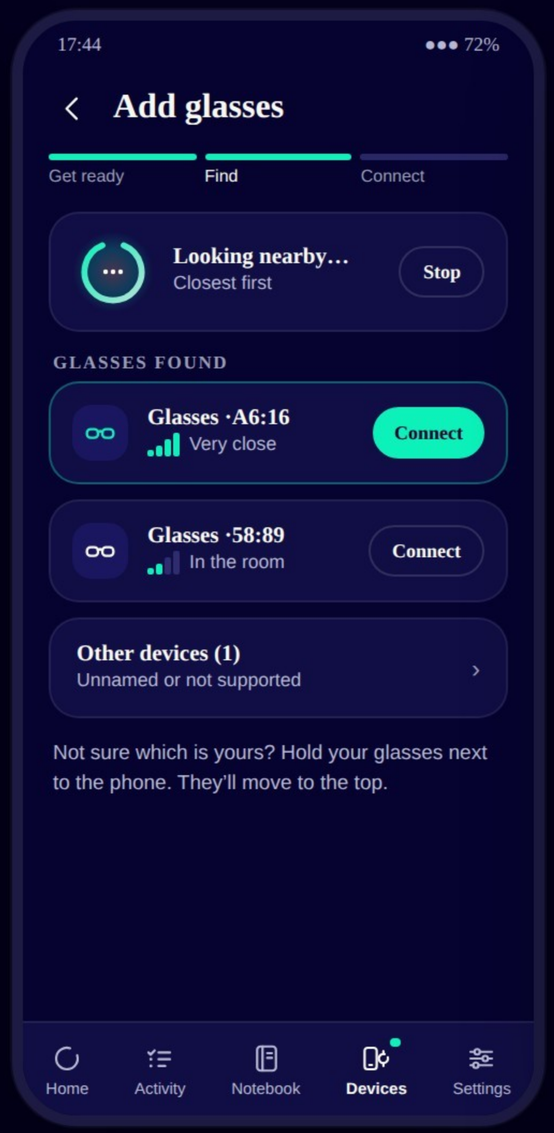

One flow, the same for every supported device. BuddyBot uses the same three steps with its own picture.

BRAND BOOK v1.6

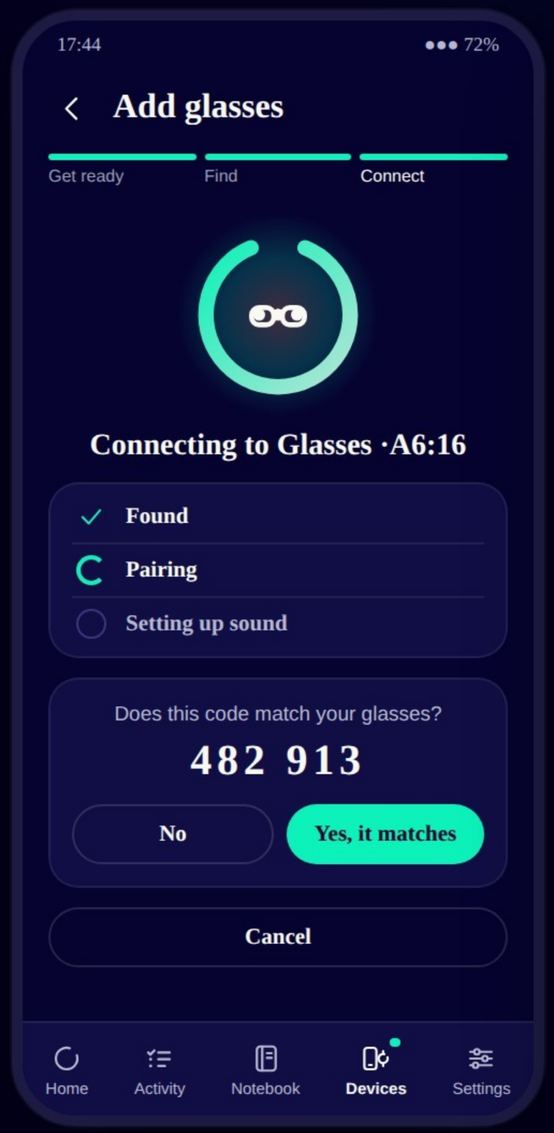

1 · Get ready

A three-step checklist. Bluetooth is checked for the user, not explained to them.

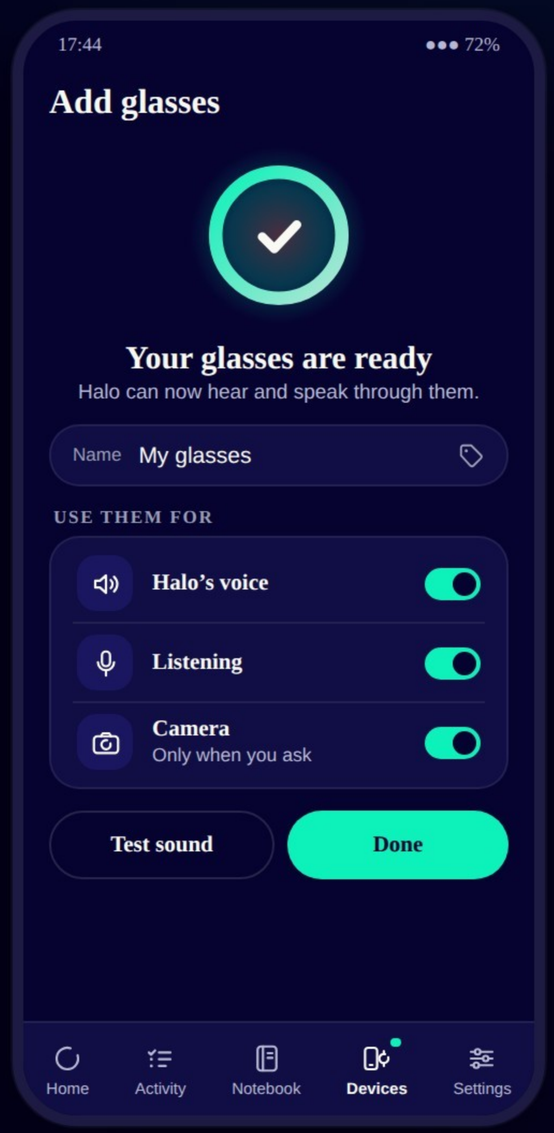

2 · Find

Glasses only, closest first, with signal bars and the last 4 address characters to tell twins apart. Stop is neutral.

3 · Connect

Progress in plain steps. The code check only appears if the glasses show a code.

Ready

A success ring, a friendly name, and three clear switches. Camera defaults to “only when you ask”.

IF IT DOESN’T WORK

Red only for a real failure. Never a dead end: every message has a next step.

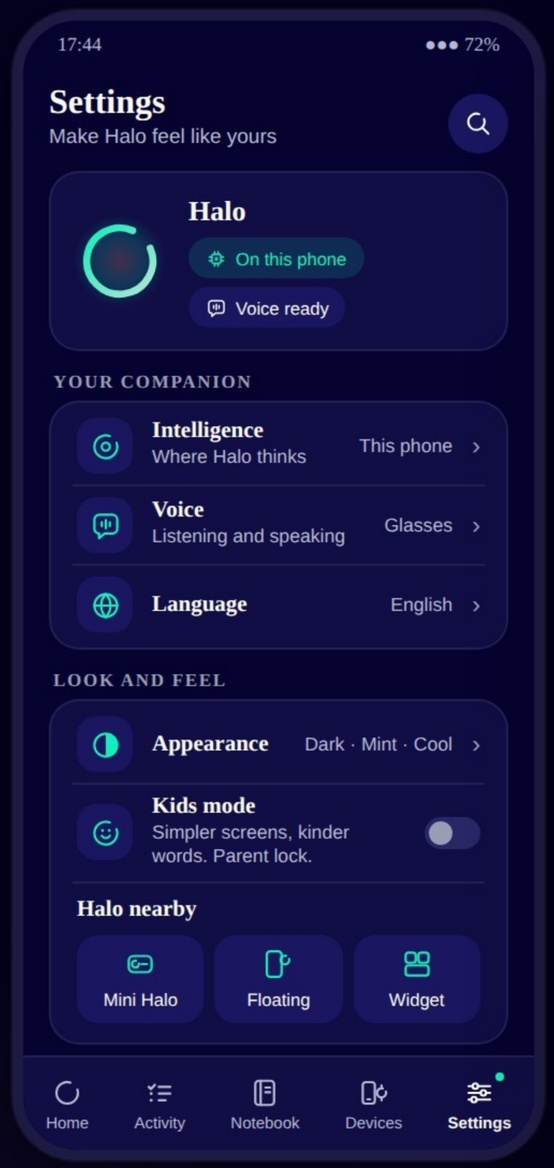

HALO · SETTINGS

Settings and the Intelligence centre

Shorter, searchable, and grouped by what people want to change, not by how Halo is built.

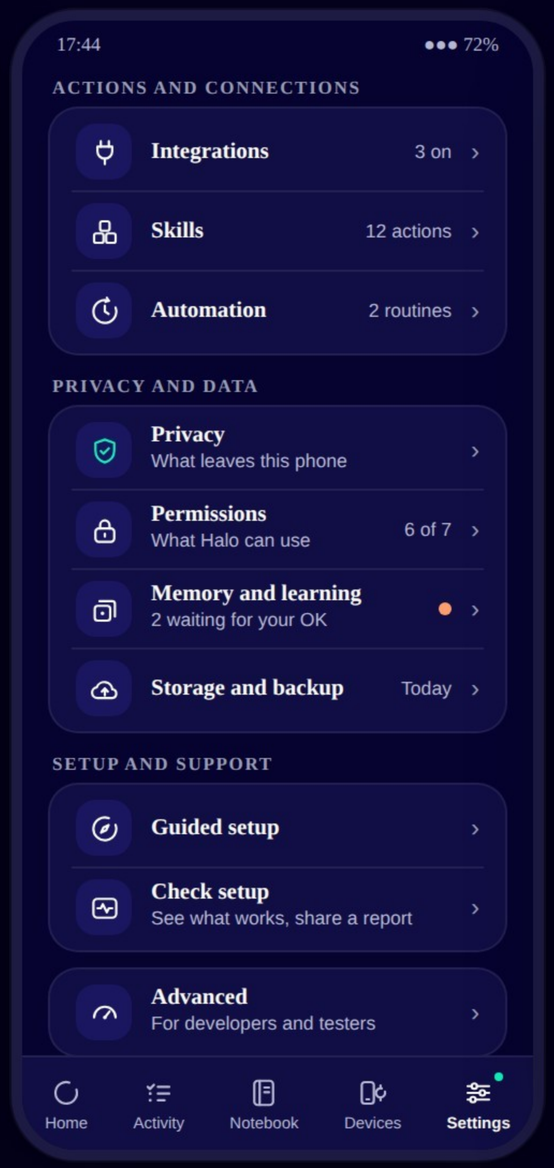

ROUND 1 · VISUALS REPLACED BY PAGE 41

BRAND BOOK v1.6

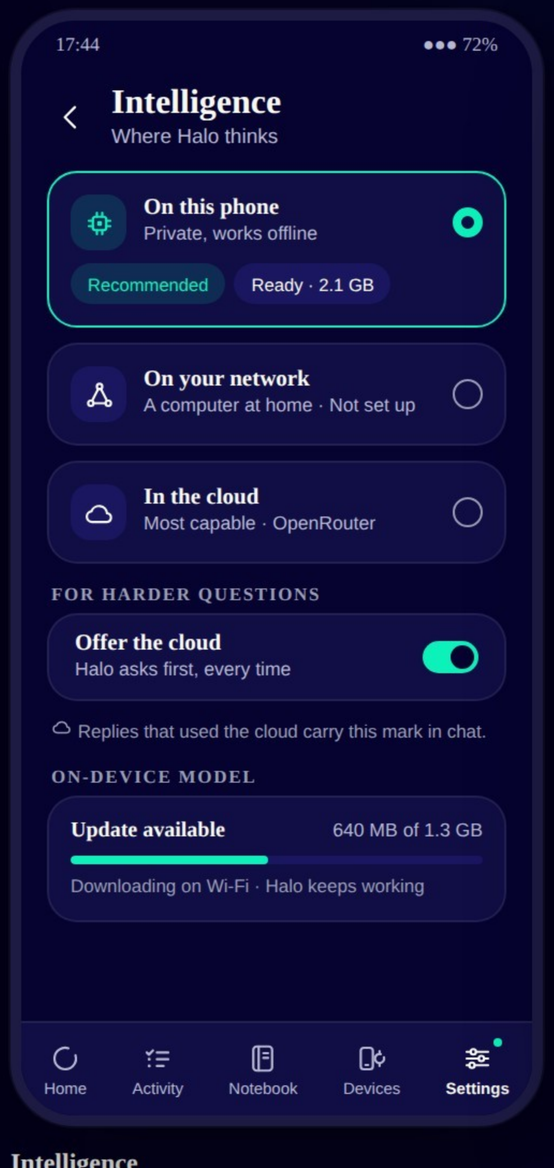

Settings · top

Search, a status card that answers “where does Halo think?”, and the current value on every row.

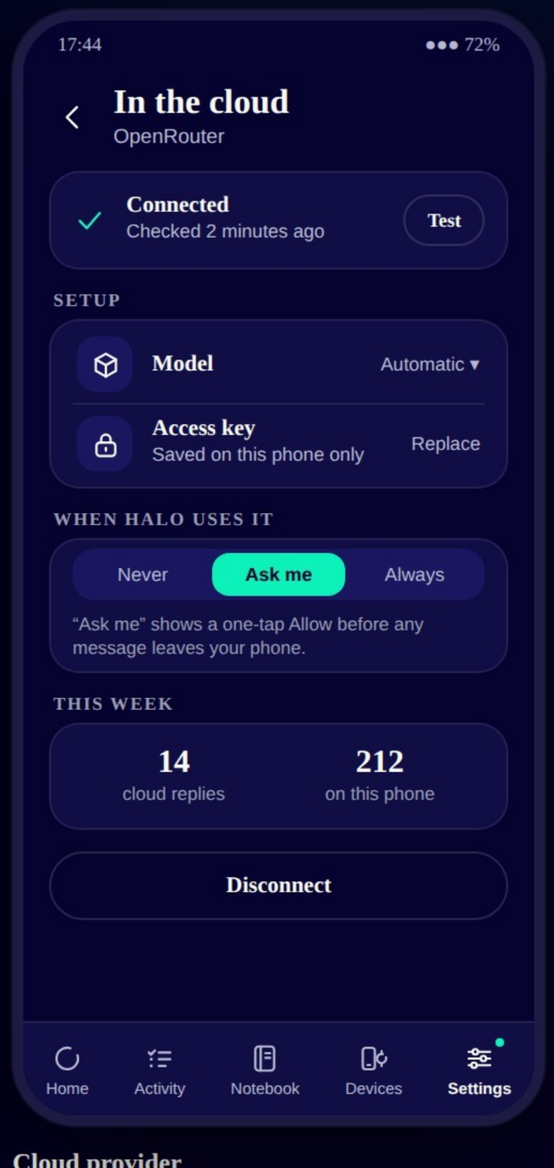

Settings · rest

Privacy gets its own home and every row its own icon. Memory waiting for you gets the Apricot dot. Advanced is the last row.

Intelligence

Three places to think, one clear choice. The cloud is never preselected; a model download never blocks Halo.

Cloud provider

Connection, model, key and usage on one screen. “Ask me” is the default.

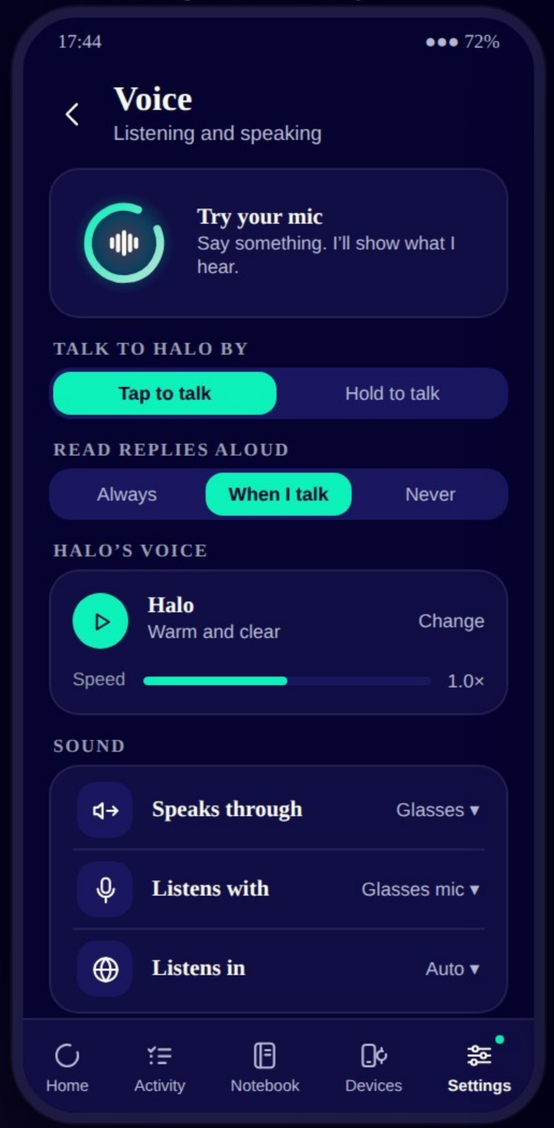

HALO · SETTINGS

Voice, Privacy, Permissions and Advanced

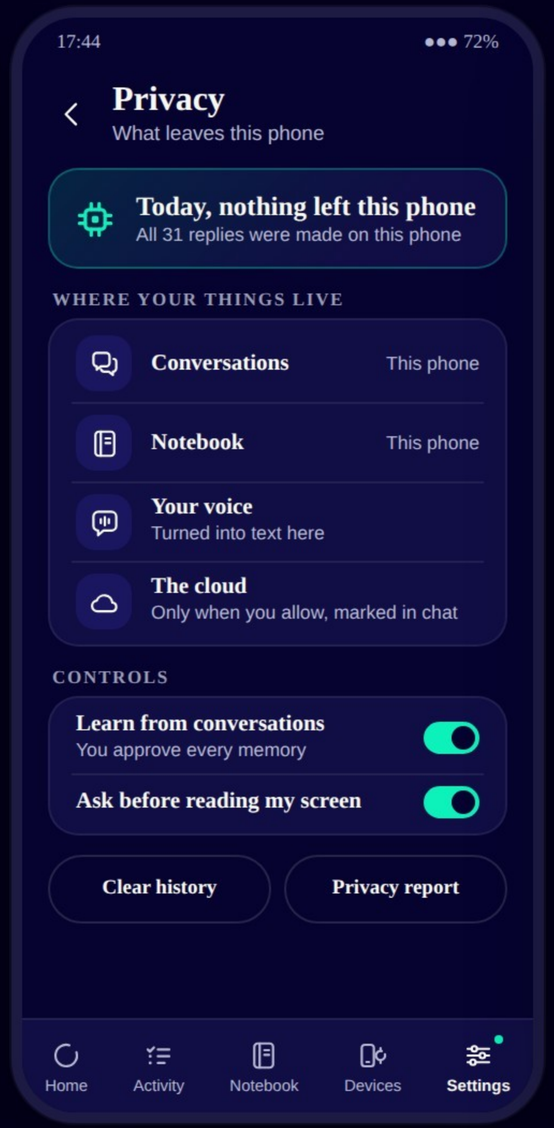

Same words everywhere: the abilities in Permissions match Devices, and “on this phone” means the same thing on Home, Settings and Privacy.

ROUND 1 · VISUALS REPLACED BY PAGE 41

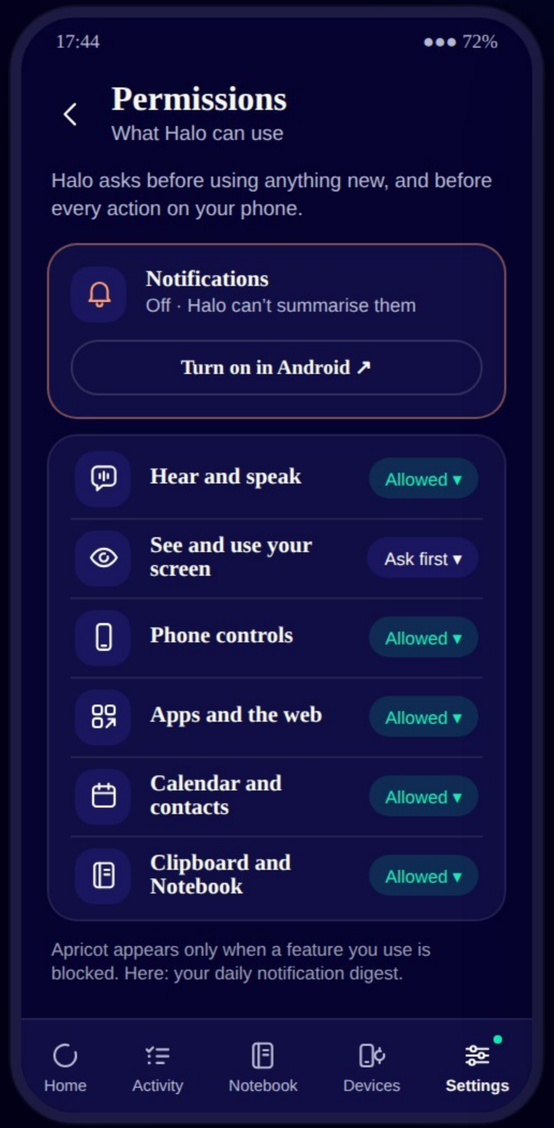

BRAND BOOK v1.6

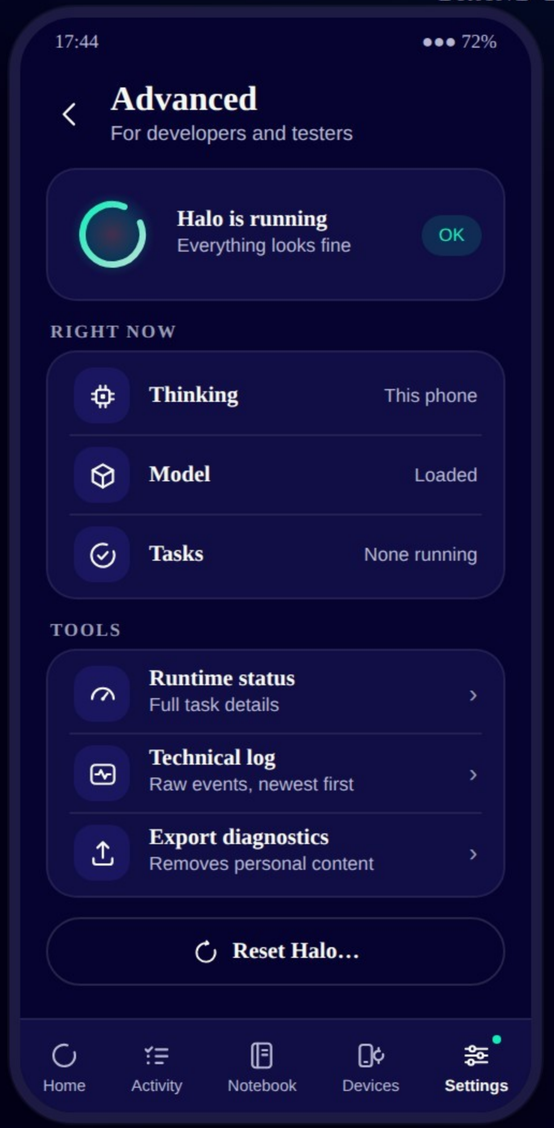

Voice
A live mic test, two simple choices, Halo’s own voice with speed, and the same sound routing as Devices.

Privacy
Leads with the answer people want: did anything leave my phone today? Then where each kind of data lives.

Permissions
The same 7 abilities as Devices, each with Allowed / Ask first / Off. Apricot only when something you use is blocked.

Advanced
Runtime status reads like a health check first. Raw logs and exports stay here, away from everyday settings. Reset always confirms.
